Takahe Fifty Years Of Conservation Management And Research:

Reintroduction Biology John G. Ewen, Doug P. Armstrong, Kevin A. Parker, Philip J. Seddon, 2012-01-30 This book aims to further advance the field of reintroduction biology beyond the considerable progress made since the formation of the IUCN SSC Re introduction Specialist Group Using an issue based framework that purposely avoids a structure based on case studies the book s central theme is advocating a strategic approach to reintroduction where all actions are guided by explicit theoretical frameworks based on clearly defined objectives Issues covered include husbandry and intensive management monitoring and genetic and health management Although taxonomically neutral there is a recognised dominance of bird and mammal studies that reflects the published research in this field The structure and content are designed for use by people wanting to bridge the research management gap such as conservation managers wanting to expand their thinking about reintroduction related decisions or researchers who seek to make useful applied contributions to reintroduction

Conservation Biology and Applied Zooarchaeology Steve Wolverton, R. Lee Lyman, 2012-12-01 Until now the research of applied zooarchaeologists has not had a significant impact on the work of conservation scientists This book is designed to show how zooarchaeology can productively inform conservation science Conservation Biology and Applied Zooarchaeology offers a set of case studies that use animal remains from archaeological and paleontological sites to provide information that has direct implications for wildlife management and conservation biology It introduces conservation biologists to zooarchaeology a sub field of archaeology and ethnobiology and provides a brief historical account of the development of applied zooarchaeology The case studies which utilize palaeozoological data cover a variety of animals and environments including the marine ecology of shellfish and fish potential restoration sites for Sandhill Cranes freshwater mussel biogeography and stream ecology conservation of terrestrial mammals such as American black bears and even a consideration of the validity of the Pleistocene rewilding movement The volume closes with an important new essay on the history value and application of applied zooarchaeology by R Lee Lyman which updates his classic 1996 paper that encouraged zooarchaeologists to apply their findings to present day environmental challenges Each case study provides detailed analysis using the approaches of zooarchaeology and concludes with precise implications for conservation biology Essays also address issues of political and social ecology which have frequently been missing from the discussions of conservation scientists As the editors note all conservation actions occur in economic social and political contexts Until now however the management implications of zooarchaeological research have rarely been spelled out so clearly **The Takahe** William George Lee, William G. Lee, Ian G. Jamieson, Ian George Jamieson, 2001 The takahe is a large flightless herbivorous bird found in New Zealand Nine contributions from the joint conference of the Ecological Societies of Australia and New Zealand reflect on attempts to conserve the takahe since its rediscovery after presumed extinction in 1948 A sampling of topics includes the origins and prehistoric ecology of takahe population trends dynamics and problems of fjordland takahe

and captive rearing **Conservation Behavior** Oded Berger-Tal, David Saltz, 2016-05-05 An in depth analysis of the impact conservation behaviour can have to develop practical tools to safeguard against biodiversity extinction **Ecology** Michael Begon, Colin R. Townsend, 2020-11-11 A definitive guide to the depth and breadth of the ecological sciences revised and updated The revised and updated fifth edition of Ecology From Individuals to Ecosystems now in full colour offers students and practitioners a review of the ecological sciences The previous editions of this book earned the authors the prestigious Exceptional Life time Achievement Award of the British Ecological Society the aim for the fifth edition is not only to maintain standards but indeed to enhance its coverage of Ecology In the first edition 34 years ago it seemed acceptable for ecologists to hold a comfortable objective not to say aloof position from which the ecological communities around us were simply material for which we sought a scientific understanding Now we must accept the immediacy of the many environmental problems that threaten us and the responsibility of ecologists to play their full part in addressing these problems This fifth edition addresses this challenge with several chapters devoted entirely to applied topics and examples of how ecological principles have been applied to problems facing us highlighted throughout the remaining nineteen chapters Nonetheless the authors remain wedded to the belief that environmental action can only ever be as sound as the ecological principles on which it is based Hence while trying harder than ever to help improve preparedness for addressing the environmental problems of the years ahead the book remains in its essence an exposition of the science of ecology This new edition incorporates the results from more than a thousand recent studies into a fully up to date text Written for students of ecology researchers and practitioners the fifth edition of Ecology From Individuals to Ecosystems is an essential reference to all aspects of ecology and addresses environmental problems of the future *Biological Invasions in New Zealand* Robert B. Allen, William G. Lee, 2006-07-04 Man s recent colonization of New Zealand has dramatically altered the resident biota and resulted in the introduction of numerous alien organisms to these once remote islands In reverse there is increasing evidence of a lesser known export of species to other regions of the world This volume presents an in depth review of the level and rate of such invasions and investigates what controls the success of invaders and the consequences for ecosystems both on land and offshore It provides invasion biologists everywhere with tests of current theories about those factors leading to the success of invaders as well as evaluating principles for understanding the nature of their impacts that form a solid basis for the effective management of biological invasions worldwide **Species Conservation** Jamieson A. Copsey, Simon A. Black, Jim J. Groombridge, Carl G. Jones, 2018-06-28 This book brings together leading conservation practitioners to reflect on their response to the current global biodiversity crisis through the lens of island species recovery and management Initial chapters cover the biological understanding of small population biology and the growing threat of invasive species while subsequent chapters discuss the management of these threats and the complexity of leading projects within a dynamic and still relatively unknown system Multiple case studies from islands worldwide illustrate key points allowing readers to draw on

the first hand practical experience of experienced professionals This resource will be invaluable to both current and future conservation professionals helping them to go beyond disciplinary comfort zones and develop manage and lead projects over extensive timeframes in a way that brings others with them on the journey *The Woodhen* Clifford Frith,2013-06-12 This book tells the fascinating success story of saving the flightless Woodhen of Lord Howe Island This unique large rail an iconic and highly endangered Australian bird was at the very brink of extinction with just 15 individuals found in 1980 when bold and risky actions were taken to save it The book begins with the discovery and ecology of Lord Howe Island It then details the history of the Woodhen its place among the rails and their evolution of flightlessness the planning implementation and trials tribulations and successes of the captive breeding programme and the way in which the wild population recovered The ecology behaviour and breeding biology of this unique flightless island rail are also discussed The text is accompanied by numerous photographs and drawings This is a story of survival yet the bird remains highly endangered as it is under constant potential threat which could tip it over the brink and to extinction The Woodhen provides gripping insights into the potential for both losing and saving vertebrate species Winner of a 2014 Whitley Awards Certificate of Commendation for Historical Zoology **Conserving Bird Biodiversity** Ken Norris,Deborah J. Pain,2002-06-06 The earth s biodiversity currently faces an extinction crisis that is unprecedented Conservationists attempt to intervene in the extinction process either locally by protecting or restoring important species and habitats or at national and international levels by influencing key policies and promoting debate Reliable information is the foundation upon which these efforts are based which places research at the heart of biodiversity conservation The role of research in such conservation is diverse It includes understanding why biodiversity is important defining units of biodiversity priority setting for species and sites managing endangered and declining populations understanding large scale processes making predictions about the future and interfacing with training education public awareness and policy initiatives Using examples from a wide range of bird conservation work worldwide researchers consider the principles underlying these issues and illustrate how these principles have been applied to address actual conservation problems for students practitioners and researchers in conservation biology **The Natural History of Weasels and Stoats** Carolyn M. King,2007 Publisher description
