Taxonomy Of *Lygodesmia* Asteraceae

Jose L. Panero

Taxonomy Of Lygodesmia Asteraceae:

Taxonomy of Lygodesmia (Asteraceae). A. Spencer Tomb, 1980

Bibliography on Seed Morphology Hans Arne Jensen, 1998-06-01 Seeds are a vital part of life on earth. They are fundamental for plant reproduction and many seeds play an important role in the diet of man and domestic and wild animals. Knowledge of the appearance of seeds, seed morphology, is of great importance to botany and seed identification in relation to seed setting, quarantine work, forensic work, seed poisoning studies, seed dispersal, seed banks, and archaeological studies. This bibliography contains 3775 references and is divided into two parts: handbooks and articles, and monographs. In the latter, the bibliographical reference is supplemented by information of importance to seed identification: genera mentioned in articles, keys, descriptions, drawings, photograph scanning electron micrographs, anatomy, and chemical methods. The index of authors contains the names of an extensive number of authors cited in the bibliography, and in the index of genera, more than 3900 genera described in one or more of the publications are cited.

Systematics, Evolution, and Biogeography of Compositae Vicki Ann Funk, 2009. This spectacular book does full justice to the Compositae/Asteraceae, the largest and most successful flowering plant family, with some 1700 genera and 24 000 species. It is an indispensable reference providing the most up-to-date hypotheses of phylogenetic relationships in the family, based on molecular and morphological characters, along with the corresponding subfamilial and tribal classification. The 2009 work not only integrates the extensive molecular phylogenetic analyses conducted in the last 25 years but also uses these to produce a metatree for about 900 taxa of Compositae. The book contains 44 chapters contributed by 80 authors, covering the history, economic importance, character variation, and systematic and phylogenetic diversity of the family. The emphasis of this work is phylogenetic; its chapters provide a detailed, current, and thoroughly documented presentation of the major and not-so-major clades in the family, citing some 2632 references. Like the Compositae, the book is massive, diverse, and fascinating. It is beautifully illustrated with 170 figures and an additional 108 cladograms, all consistently color-coded based on the geographic range of the included taxa; within these figures are displayed 443 color photographs clearly demonstrating the amazing array of floral and vegetative form expressed by members of the clade. Resúmen del editor.
