

MANTA TRUST CLIMATE MANDATE

Humanity is facing the defining crisis of our time, a climate emergency of our own making. Each year, billions of tons of CO₂ are released into the atmosphere from human activity, producing greenhouse gas emissions at a record high. No place on earth is safe from the devastating effects of the climate crisis, including the world's oceans, which play a fundamental role in absorbing and redistributing heat and carbon dioxide. Consequently, the polar ice caps are melting, rainforests are burning, coral reefs are dying, and the oceans are acidifying. We must ACT NOW or the impact on humans and all life on earth will be catastrophic.

IMPACTS ON MANTA AND DEVIL RAYS

Ocean productivity models predict huge declines in zooplankton biomass in tropical waters, which would spell disaster for manta and devil ray populations.

Rising sea surface temperatures are causing mass coral bleaching and mortality events. As the building blocks of the entire reef ecosystem, the death of coral reefs is destroying the habitat which reef manta rays depend on for their survival.

Despite being a small non-profit marine conservation organisation, we are very aware that we too have a carbon footprint and that it is our responsibility to reduce this as much as possible.

As a team, the Manta Trust have reviewed our aims and operations, and are committed to:

Taking meaningful steps to identify and reduce our core team's carbon footprint (travel, digital footprint, merchandise, banking, and field research).

Offsetting the emissions that we cannot avoid.

Sharing best practice and learnings with our global network of affiliate projects, sponsors, corporate partners, staff, and followers to inspire further change.

Adding our voice and support to climate campaigns and policy actions.

Using our online platforms and public events to talk regularly about the climate crisis and its impact on the oceans and marine species, encouraging urgent action and debate whenever possible.

Expanding our educational outreach to engage a greater number and diversity of people globally with climate issues and their impact on the marine environment, empowering them to act for the oceans.

For more information on specific actions the Manta Trust are taking to achieve the above commitments, please visit our website:

Review of NOAA's Plan for the Scientific Data Stewardship Program

National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Climate Data Records from NOAA Operational Satellites, 2005-09-16 To better understand our climate system it is important that we have climate data records CDRs time series of measurements of sufficient length consistency and continuity to determine climate variability and change that possess the accuracy longevity and stability to facilitate credible climate monitoring In 2004 the National Research Council NRC published Climate Data Records from Environmental Satellites to provide the National Oceanic and Atmospheric Administration NOAA with initial guidelines on how to develop and implement an effective CDR program NOAA used this book to draft a plan for a new Scientific Data Stewardship SDS program and then asked NRC to review it The new program will be responsible for processing archiving and distributing observations from satellite and supporting ground based platforms for monitoring diagnosing understanding predicting modeling and assessing climate variation and change The NRC review outlines several ways in which to improve NOAA's draft plan most importantly by clarifying advisory mechanisms providing more detail about how NOAA will coordinate with important partners in generating CDRs articulating how the program will prioritize its activities and developing ways to realistically project future costs However the draft plan is sound overall and NOAA should immediately begin implementing the SDS program while revising the plan as recommended in the book

Climate Change at the UN Security Council Ash Murphy, 2025-06-30 This book examines the operation of the United Nations Security Council UNSC to better understand the motivating factors that underpin its activation of Article 39 Arguing that climate change should be considered a threat to international peace and security the theory of securitisation is employed to dissect the UNSC and identify the power dynamics that dictate when and why Article 39 is activated Exploring how contemporary threats to peace and security can unite the agenda of the UNSC and shedding light on the narratives used to reach consensus the author considers how this knowledge might be purposed to

support the transition of climate change into the realm of Article 39 How necessary and useful a UNSC resolution would be is given thought and a possible pathway to achieving it is outlined Aimed at academics and institutions that commentate on the UNSC climate change securitisation theory and undergraduate and postgraduate students of law international relations UN law and those undertaking environmental studies this book will also be of interest to practitioners and diplomats in and outside of the UN and anyone seeking to further the climate security nexus

The Climate Solutions Consensus National Council for Science and the Environment, 2012-06-22 In 2007 the Intergovernmental Panel on Climate Change shared the 2007 Nobel Peace Prize with former Vice President Al Gore for its reporting on the human causes of climate change In 2008 the National Council for Science and the Environment reported that the acceleration of climate change is already faster than the IPCC projected only a year earlier How we deal with the rapid environmental changes and the human forces that are driving these changes will be among the defining issues of our generation Climate Solutions Consensus presents an agenda for America It is the first major consensus statement by the nation's leading scientists and it provides specific recommendations for federal policies for state and local governments for businesses and for colleges and universities that are preparing future generations who will be dealing with a radically changed climate The book draws upon the recommendations developed by more than 1200 scientists educators and decision makers who participated in the National Council for Science and the Environment's 8th National Conference on Science Policy and the Environment After presenting a lucid narrative of the science behind climate change and its solutions Climate Solutions Consensus presents 35 practical results oriented approaches for minimizing climate change and its impacts It clearly spells out options for technological societal and policy actions And it deals head on with controversial topics including nuclear energy ocean fertilization and atmospheric geo engineering One of the book's key conclusions is that climate solutions are about much more than energy sources They involve re-examining everything people do with an eye toward minimizing climate impacts This includes our eating habits consumption patterns transportation building and housing forestry land use education and more According to these scientists the time to act is now With clarity and urgency they tell us exactly what needs to be done to start reversing the driving factors behind climate change minimizing their consequences and adapting to what is beyond our power to stop
