Yanarella, Richard S. Levine, 2011 This book responds to some of the twenty first century's most assuming problems of our times global warming sub national terrorism natural resource depletion and economic environmental and financial crises It finds short and long term solutions to these global woes by looking to the city as the fulcrum for introducing sustainability around the world Beginning with an outline of a robust strategy of sustainable cities or sustainable city regions that has emerged out of over two and a half decades of theoretical and practical work the authors show why these portentous problems can best be addressed at the local regional scale In the process this book cuts through the received wisdom and popular misunderstandings about sustainability and peels away the conceptual fog and ideological confusion about the

meaning of sustainability Drawing upon extensive fieldwork in North America Europe and Asia the authors examine both strong and weak examples of sustainable city approaches that validate their distinctive urban sustainability strategy They discover keen insights and important lessons in these case studies for sustainability practice across the globe whether in small towns in the US and Canada large cities in Europe or tiny Chinese villages in Asia Their concluding chapter argues that only the road less travelled holds real promise of creating sustainable city regions around the world guided by the toolkit of ecological and technological conviviality
