The Clam Shell Mary Lee Settle, 1987 Set in 1936 The Clam Shell continues the mesmerizing story Settle began in *The Love Eaters* *The Clamshell Show (Mermaid School #2)* Lucy Courtenay, 2020-06-02 A sweet and sparkling chapter book series about finding your place and believing in yourself Marnie Blue's adventures continue at Lady Sealia Foam's Mermaid School Now that she's saved the day and made some new friends she's ready to conquer the next challenge and continue to learn more about her underwater world [Lake Pontchartrain-Lake Maurepas Clam Shell Dredging](#), 1987 **Equations for a Study of a Roll-out Clamshell Ejection Concept for Spinning Rocket Vehicles** Lawrence F. Hatakeyama, 1970 Equations for estimating the motion forces and couples applicable to the design of clamshell systems utilizing a new roll out ejection concept are presented Both the deployment and the free flight phases of the clamshell ejection are considered No attempt is made to answer the thermal vibratory and structural detail problems of these clamshells **Shell Craft** Virginia Fowler Elbert, Virginia Fowler, 1993-10-01 Easy to follow instructions for decorative boxes mirror frames soap dishes jewelry napkin holders paperweights much more Profusely illustrated Includes list of supply sources *The Clam Shell* Mary Lee Settle, 1971 Set in 1936 The Clam Shell continues the mesmerizing story Settle began in *The Love Eaters* *Investigation of a Clamshell Roll-out Ejection Concept* Lawrence F. Hatakeyama, 1971 The equations for the motion forces and couples generated by clamshells released from spinning sounding rockets in accordance with a roll out ejection concept are presented The application of these equations to a study of a system for the Javelin i.e. Honest John Nike Nike X248 rocket vehicle is discussed The roll out ejection concept advocated requires that each deploying clamshell be pivoted about an axis at its trailing edge located in the system sectioning plane Clamshell despinning is a consequence of this deployment since the pivotal i.e. roll out rate is in opposition to the rocket vehicle spin The energy required by the deployment is derived largely from the rotational energy of the clamshell Thus the rocket vehicle will not be significantly despun by this kind of clamshell deployment This ejection concept also permits a system design which makes it possible to limit clamshell angular motion to rotation about that one of its centroidal principal axes which is brought into parallelism with the rocket vehicle longitudinal axis Also by equalizing the moments of inertia about the other centroidal principal axes the rollout motion can be decoupled from any extraneous angular motion about these axes **Clam Shell Dredging in Lakes Pontchartrain and Maurepas, Louisiana: Public comments** United States.
