V. THE INDICATIONS AND CONTRAINDICATIONS FOR DIGITALIS

Congestive Heart Failure

The prime indication for digitalis therapy is congestive heart failure resulting from defective myocardial contraction or from the inefficiency of excessive ventricular rate, or from a combination of the two. When congestive failure develops despite normal myocardial function (e.g. cardiac tamponade), digitalis is usually useless and may even be harmful. When the congestive failure is the result of a combination of mechanical factors (e.g. valvular stenosis) and of myocardial factors, (e.g. the dilation and/or hypertrophy that is

the invariable result of functionally significant valvular disease), the degree of effectiveness of digitalis varies and is difficult to predict. Even when the fault lies entirely in the myocardium, digitalis may be ineffective, especially in acute inflammatory and degenerative diseases of the heart muscle (e.g. acute rheumatic fever, diphtheritic myocarditis, typhus). However, as a rule, if the heart is enlarged and congestive phenomena are present, digitalis should be used and will be beneficial.

Heart Disorders with Rapid Ventricular Rate

Digitalis is valuable in the management of most disorders of cardiac mechanism that are characterized by a rapid ventricular rate. When heart failure is present the results are more consistent than when it is not.

(1) *Chronic atrial fibrillation* with rapid ventricular rate is a classic indication for

The Therapeutic Use of Digitalis George Canby Robinson, 1923 The Clinical Use of Digitalis Drew Luten, 1936

Clinical Applications of Cardiovascular Drugs L.S. Dreifus, A.N. Brest, 2012-12-06 During the past decade enormous progress has been made in the development of new cardiovascular drugs and in our understanding of the clinical pharmacology and the pharmacokinetics of old drugs. In addition, newer applications of older agents have emerged. For example, vasodilators such as nitroglycerin are now being employed in the treatment of congestive heart failure and anti-hypertensives such as bretylium are used in the management of ventricular arrhythmias. Individual chapters in this book focus on 1) the clinical pharmacology and pharmacokinetics of the individual drugs and 2) the clinical applications of these drugs with attention also to serum concentrations, pathophysiology and drug interactions where appropriate. The contributors to this text have labored to provide the reader with a meaningful practical update on the clinical uses and usefulness of cardioactive drugs. We are deeply grateful to each of them for their generous participation in this endeavor.

LEONARD S DREIFUS and JOEL MORGANROTH

Ideally, the management of cardiac arrhythmias must be predicated on 1) complete elucidation of the genesis of the various rhythm disturbances and 2) a full understanding of the pharmacologic action of individual antiarrhythmic agents. Only with this precise information does it become possible to administer a particular agent or agents specifically effective against a given arrhythmia.

In spite of old vintage and 200 years of clinical use, digitalis remains an interesting therapeutic agent to clinicians as well as to the pharmacologist, the biochemist and colleagues in other disciplines of theoretic medicine. When a drug, however, has so many attractive facets, it seems proper and advisable for the success of a scientific meeting to focus on a number of well-defined aspects. This symposium was devoted to pharmacokinetics, drug metabolism, analytic procedures, blood level determinations and their interpretation both for therapeutic and toxic situations. Considerable progress has been made during the last years in this area of digitalis research. The time was suitable for a critical reappraisal of facts and theories and for future planning. Our main intention was to relate analytic data and biochemical findings to clinical problems and questions. Despite the undoubtedly basic character of clinical pharmacology, it is nevertheless an applied science which should help to develop the rational basis of therapeutics. We are particularly grateful to the active participants who bore the burden of preparing

presentations and even worse manuscripts At the same time we are well aware that many other active research groups would have been able to contribute in this way but our program was limited because of the short time available Their knowledge is included in the discussion parts of the meeting so we hope a well balanced description of the present state of affairs emerged in this volume **The Medical Clinics of North America** ,1917 *The Medical Bulletin* United States.
