**Color Space and Its Divisions** Rolf G. Kuehni, 2003-04-28. It has been postulated that humans can differentiate between millions of gradations in color. Not surprisingly, no completely adequate detailed catalog of colors has yet been devised. However, the quest to understand, record, and depict color is as old as the quest to understand the fundamentals of the physical world and the nature of human consciousness. Rolf Kuehni's *Color Space and Its Divisions: Color Order from Antiquity to the Present* represents an ambitious and unprecedented history of man's inquiry into color order, focusing on the practical applications of the most contemporary developments in the field. Kuehni devotes much of his study to geometric three dimensional arrangements of color experiences, a type of system developed only in the mid nineteenth century. Color spaces are of particular interest for color quality control purposes in the manufacturing and graphics industries. The author analyzes three major color order systems in detail: Munsell, OSA, UCS, and NCS. He presents historical and current information on color space.
