The Commercial Space Age Andrew M. Thorpe, 2003-05

The Commercial Space Station Andrew M.

Thorpe, 2007-08-28 By 2016 the International Space Station will face retirement. What then? When colonizing space, NASA blazes the trails but private industry must build the roads. For common citizens to inhabit space, there must be a station in near Earth orbit, only 400 miles high, where dedicated commercial activities can take place. It will be a hub of commerce where industrial scientists can perform chemistry and biology, tourists can have lavish vacations, solar power stations can be built and serviced, and where satellites can be tested and deployed. This is now within the grasp of several businesses that are determined to see this vision through. The commercialization of low Earth orbit can free NASA and the other space agencies around the world to colonize the Moon and Mars. In fact, these agencies will be some of the first customers on an industrial facility in space. The commercial space station can be the crucible from which a new economy is forged where better medicines, cleaner energy sources, stronger materials, and wider human experiences can be realized. These space stations are being deployed now. They will do practical, useful things in space for the common good of taxpayers. They will be new tools in the fight to solve medical and environmental problems to come. And they will provide jobs and tax revenue. The 21st century will be an industrial space century where average citizens can participate as entrepreneurs or customers.

The Rise of the Commercial Space Industry Brian C. Odom, 2024-09-13 This collection explores the evolution of the commercial space industry from the beginning of the space age through the early twenty-first century. Today, the space industry is taking on an increased leadership and innovation role in both space access and exploration. The growth of commercial space over the past decades offers a potential new paradigm for space exploration, one in which industry transitions from supplier to partner. However, many questions remain. This book seeks to bring to light these questions, which span from the most seemingly consequential: how will humanity explore the Moon and Mars, to the most basic: what is commercial space? To further develop the historical context of commercial space and thereby better inform decision making at NASA in the future, this volume examines a broad range of questions related to the history of commercial space operations, including but not limited to: how has the concept of commercial space evolved in different fields and disciplines? What have been the major events and milestones in the emergence and evolution of commercial space activities in the USA and internationally? How has the US Government assisted or impeded the emergence and evolution of commercial space activities? Providing contributions from a range of different disciplines and backgrounds, the authors of this volume offer valuable insights for scholars researching the history of space and space policy, as well as decision makers working at NASA or within the wider space industry.

Security and Stability in the New Space Age Brad Townsend, 2020-07-12 This book examines the drivers behind great power security competition in space to determine whether realistic strategic alternatives exist to further militarization. Space is an area of increasing economic and military competition. This book offers an analysis of actions and events indicative of a growing

security dilemma in space which is generating an intensifying arms race between the US China and Russia It explores the dynamics behind a potential future war in space and investigates methods of preventing an arms race from an international relations theory and military strategy standpoint The book is divided into three parts the first section offers a broad discussion of the applicability of international relations theory to current conditions in space the second is a direct application of theory to the space environment to determine whether competition or cooperation is the optimal strategic choice the third section focuses on testing the hypotheses against reality by analyzing novel alternatives to three major categories of space systems The volume concludes with a study of the practical limitations of applying a strategy centered on commercialization as a method of defusing the orbital security dilemma This book will be of interest to students of space power strategic studies and international relations
