[The Collected Mathematical Papers of Arthur Cayley Volume 10](#) Arthur Cayley, 2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1896 edition Excerpt there are thus 5x4 20 tetrahedra having 20 x 4 summits which are the 20 points B each 4 times 20 x 4 centres of faces which are the SO points B each 4 times and 20 x 6 mid points of sides which are the 30 points 6 each 4 times It thus appears that as mentioned above the five regular figures depend only on the points A B 0 and 3 We might take as poles two opposite points A B 0 or and in each case determine in reference to these the positions of the other points but for brevity I consider only the case in which we take as poles two opposite points A We have the following table Poles two opposite points A I add for greater completeness the following results some of which were used in the calculation of the foregoing table Considering successively 1 the tetrahedral triangle summits 3 points B centre a point B 2 the hexahedral square summits 4 points B centre a point 0 3 the octahedral triangle summits 3 points c centre a point B 4 the icosahedral triangle summits 3 points A centre a point B 5 the dodecahedral pentagon summits 5 points centre a point B and 6 what may be called the small pentagon summits 5 points 4 lying within a dodecahedral

pentagon and having therewith the common centre B we may in each case write  $s$  the side  $r$  the radius or distance of the centre from a summit  $p$  the perpendicular or distance of the centre from a side And the values then are 680 ON THE HESSIAN OF A QUARTIC SURFACE From the Quarterly Journal of Pure and Applied Mathematics vol xv 1878 pp 141 144 The surface considered is  $U^2 + V^2 + W^2 + X^2 + Y^2 + Z^2 = 0$  viz this may be considered as the central inverse of the ellipsoid or say The values of the second derived functions or terms of the Hessian

Wertz, 2012-12-06 Roger D Werking Head Attitude Determination and Control Section National Aeronautics and Space Administration Goddard Space Flight Center Extensive work has been done for many years in the areas of attitude determination attitude prediction and attitude control During this time it has been difficult to obtain reference material that provided a comprehensive overview of attitude support activities This lack of reference material has made it difficult for those not intimately involved in attitude functions to become acquainted with the ideas and activities which are essential to understanding the various aspects of spacecraft attitude support As a result I felt the need for a document which could be used by a variety of persons to obtain an understanding of the work which has been done in support of spacecraft attitude objectives It is believed that this book prepared by the Computer Sciences Corporation under the able direction of Dr James Wertz provides this type of reference This book can serve as a reference for individuals involved in mission planning attitude determination and attitude dynamics an introductory textbook for students and professionals starting in this field an information source for experimenters or others involved in spacecraft related work who need information on spacecraft orientation and how it is determined but who have neither the time nor the resources to pursue the varied literature on this subject and a tool for encouraging those who could expand this discipline to do so because much remains to be done to satisfy future needs
