

A woman with long dark hair is seen from behind, hugging a young child who is lying on a bed. The child is wearing a blue shirt and a baseball cap. The room has a patterned wallpaper and a string of star-shaped decorations hanging from the ceiling. A skylight is visible at the top of the frame.

The nature of the economic cycle has been a long standing problem for economists. Key questions include: What are the causes of the economic cycle? Are the causes endogenous or exogenous and Why is the economic cycle irregular? This book explores the theory of the economic cycle in relation to economic growth in China. The book concludes that the cause of the economic cycle is endogenous, that the periodic fluctuation of economic growth and its dynamic equilibrium are natural aspects of the growth of the economy and it puts forward a new model of the economic cycle which confidently predicts the future trajectory of China's economic growth.

Proceedings of the Fourth International Workshop on MACHINE LEARNING Pat Langley, 2014-05-12. Proceedings of the Fourth International Workshop on Machine Learning provides careful theoretical analyses that make clear contact with traditional problems in machine learning. This book discusses the key role of learning in cognition. Organized into 39 chapters, this book begins with an overview of pattern recognition systems of necessity that incorporate an approximate matching process to determine the degree of similarity between an unknown input and all stored references. This text then describes the rationale in the Protos system for relegating inductive learning and deductive problem solving to minor roles in support of retaining indexing and matching exemplars. Other chapters consider the power as well as the appropriateness of exemplar based representations and their associated acquisition methods. This book discusses as well the extensions to the way a case is classified by a decision tree that address shortcomings. The final chapter deals with the advances in machine learning research. This book is a valuable resource for psychologists, scientists, theorists and research workers.

Constraint-Based Mining and Inductive Databases Jean-Francois Boulicaut, 2005. The interconnected ideas of inductive databases and constraint based mining are appealing and have the potential to radically change the theory and practice of data mining and knowledge discovery. This book reports on the results of the European IST project cInQ consortium on knowledge discovery by Inductive Queries and its final workshop entitled Constraint Based Mining and Inductive Databases organized in Hinterzarten, Germany in March 2004.

The Rhetoric of Economics Deirdre N. McCloskey, 1998-05-15. A classic in its field, this pathbreaking book humanized the scientific rhetoric of economics to reveal its literary soul. Economics needs to admit that it like other

sciences works with metaphors and stories Its most mathematical and statistical moments are properly dominated by comparison and narration that is to say human persuasion The book was McCloskey s opening move in the development of a humanomics and unification of the sciences and the humanities on the field of ordinary business life Intermediate Microeconomics Lester O. Bumas,2015-03-04 This is the first intermediate microeconomics textbook to offer both a theoretical and real world grounding in the subject Relying on simple algebraic equations and developed over years of classroom testing it covers factually oriented models in addition to the neoclassical paradigm and goes beyond theoretical analysis to consider practical realities **Farm Prices** Willard W. Cochrane,1958-01-01 Farm Prices was first published in 1958 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions Few domestic questions are so controversial as the farm problem yet the average city man finds it difficult to understand the basic issues involved In this book Professor Cochrane describes for the layman the nature and causes of the commercial farm problem and the rural poverty problem and provides the basis for making informed judgments about these problems and their possible solutions He analyzes the economic and political forces which are at work in the farm economy explains the organization of modern agriculture showing the unique structure of farming and draws a vivid picture of the revolutionary developments which have taken place in agriculture He discusses behavior patterns of farmers and consumers as they relate to the farm economy and the role of government in the farm industry and in the lives of farmers Farm prices are constantly fluctuating and out of this price variability emerge such serious and continuing farm problems as variable incomes low incomes over extended periods and uncertainty in production planning In this study Professor Cochrane seeks to get at the root of the trouble by first exploring and exposing what he considers a basic fallacy in our present day thinking and approach to the farm problem This is the widely held myth of an automatically adjusting agriculture an agriculture that is always out of balance because of an emergency This myth he points out beclouds the issues involved in the whole farm problem The farm price myth splits two ways in the public mind Mr Cochrane explains but these divergent attitudes represent differences only in mechanics not in principle and they are equally effective in obscuring the real picture One segment of the public believes that agriculture if left alone for a while would gravitate toward and stabilize at some desirable level and pattern of prices production and incomes The other segment believes that the same result would occur if agriculture were given a temporary helping hand by the government Mr Cochrane shows the fallacies inherent in both of these convictions by presenting an integrated overall picture of farm price behavior as it really exists On a basis of this realistic view he presents the two alternatives or hard policy choices that he believes the American farmer faces today Willard W Cochrane is Professor Emeritus of Agricultural and Applied Economics at the University of Minnesota He is the author of a number of books including The City Man s Guide to the Farm Problem and Farm Prices Myth and Reality He previously served as an economist with the Food and Agriculture

Organization of the United Nations and with the U S Department of Agriculture He is the co author of Economics of American Agriculture and Economics of Consumption
