Dobkowski,Isidor Wallmann,1998-03-01 Michael Dobkowski and Isidor Wallman have edited a book that although ominous is not a fatalistic look at the future The Coming Age of Scarcity lays out the perils of not recognizing the reality of genocide or of acknowledging the full implications of warfare Showing how scarcity and surplus populations can lead to disaster The Coming Age of Scarcity is about evil It tells of ethnic cleansing and excavates the world's expanding killing fields The writers in this volume are all too aware that the future suggests that present day population growth land resources energy consumption and per capita consumption cannot be sustained without leading to greater catastrophes The essays in this volume ask What is the solution in the face of mass death and genocide As philosopher John K Roth says in the Foreword The essays can sensitize us against despair and indifference because history shows that human made mass death and genocide are not inevitable and no events related to them will ever be    *NASA EP.* United States. **Congressional Record** United States. Congress,1975      **The Social Construction of Science** T.

Jagtenberg,2012-12-06 This book concerns the institutionalisation of the physical sciences The book breaks with the established tradition in the history philosophy and sociology of sciences by attempting to capture both the cognitive and social dimensions of institutionalisation in one unified analysis This unification has been achieved through a treatment of research as goal directed social action a theme which has been developed both theoretically and empirically The analysis presented is therefore unique in its breadth of focus and shows how the traditional concerns of sociology with generalised macro structures of meaning and action can be related to the lifeworlds of individual scientists The sociology of the sciences is still today a relative newcomer to the field of sciences studies which has traditionally been dominated by the history and philosophy of the sciences I hope that this book reflects the excitement I experienced in being able to respond to the debates and concepts which erupted in that particularly fertile period following the publication of Kuhn s Structure of Scientific Revolutions in 1962 a period from which a cognitively oriented sociology of the sciences was to emerge as a serious challenger to orthodoxies in the history philosophy and sociology of sciences

**Powering the Dream** Alexis Madrigal,2011-03-29 Few today realize that electric cabs dominated Manhattan s streets in the 1890s that Boise Idaho had a geothermal heating system in 1910 or that the first megawatt turbine in the world was built in 1941 by the son of publishing magnate G P Putnam a feat that would not be duplicated for another forty years Likewise while many remember the oil embargo of the 1970s few are aware that it led to a corresponding explosion in green technology research that was only

derailed when energy prices later dropped In other words We ve been here before Although we may have failed America has had the chance to put our world on a more sustainable path Americans have in fact been inventing green for more than a century Half compendium of lost opportunities half hopeful look toward the future Powering the Dream tells the stories of the brilliant often irascible inventors who foresaw our current problems tried to invent cheap and energy renewable solutions and drew the blueprint for a green future   **Annual Energy Review** ,1985   **Survival Scrapbook: Energy** Stefan A. Szczelkun,1973   *Survival Scrapbook: Energy* Stefan Szczelkun,2018-03-03 The third and final volume of a collection of quirky and mostly graphic data on our basic life supports The previous two volumes were titled Survival Scrapbook Shelter and Food This volume Energy contains a prescient set of renewable energy maps of the UK and North America Its implied call for decentralised energy production that is in control of those who need the energy is still relevant
