City Lights Dan Barry, 2009-03-31 With a poet s clear eye and a journalist s curiosity about how a city works Dan Barry shows us New York as no other writer has seen it Evocative intimate piercing and often funny the essays in *City Lights* capture everyday life in the city at its most ordinary and extraordinary Wandering the city as a columnist for The New York Times Barry visits the denizens of the Fulton Fish Market on the eve of its closing journeys with an obsessed guide through the secret underground of abandoned subway stops tunnels and aqueducts touches down in bars hospitals churches diners pools zoos memorabilia stuffed apartments at births and funerals the places where people gather are welcomed or depart talks to the ex athlete who caught the falling baby the performance artist who works as a mermaid the octogenarian dancers who find quiet joy in their partnership and the guy who waves flags over the Cross Bronx Expressway to wish drivers safe passage Along the way Barry

offers glimpses of New York's distant and recent past. He explains why the dust-coated wishbones hanging above the bar at McSorley's Old Ale House belong to the doughboy ghosts of World War I. He recalls a century of grandeur at the Plaza Hotel through the tales of longtime doormen who will soon be out of a job. He finds that an old man's quiet death opens back into a past that the man had spent his life denying. And from the vantage of the Circle Line cruise around Manhattan, he joins tourists as they try to make sense of still smoldering ruins in Lower Manhattan three weeks after September 11, 2001. Each story in *City Lights* illuminates New York as it was and as it is, always changing, always losing and renewing parts of itself, every street corner an opportunity for surprise and revelation.

New Mechanics and New Electromagnetism of Axiomatized Wang Jianhua, 2025-03-24. At the beginning of the 20th century, the world-famous mathematician Hilbert suggested deducing all the theorems of physics using mathematical axiomatization. However, for more than 100 years, mathematicians and physicists have not accomplished this great scientific dream. Many people are skeptical about the suggestion of axiomatizing physics. The author has established a new axiomatic system of physics consisting of six axioms based on physical experiments. Many famous theorems of physics can be deduced from the new axiomatic system. For example, 1. The new universal gravitation formula, viz. 2. A new formula for the magnetic field force, viz. In addition, the authors have designed three very simple optical experiments based on the principle of lasers and the theory of interference of light, which will directly verify whether the principle of special relativity, the invariance of the speed of light, is correct or incorrect.
