## **The Classical Language Of Architecture:**

**The Classical Language of Architecture** John Summerson, 1966-12-15 The author's purpose is to set out as simply and vividly as possible the exact grammatical workings of an architectural language. Classical architecture is a visual language and like any other language has its own grammatical rules. Classical buildings as widely spaced in time as a Roman temple, an Italian Renaissance palace and a Regency house all show an awareness of these rules even if they vary, break them or poetically contradict them. Sir Christopher Wren described them as the Latin of architecture and the analogy is almost exact. There is the difference however that whereas the learning of Latin is a slow and difficult business, the language of classical architecture is relatively simple. It is still to a great extent the mode of expression of our urban surroundings since classical architecture was the common language of the western world till comparatively recent times. Anybody to whom architecture makes a strong appeal has probably already discovered something of its grammar for himself. In this book the author's purpose is to set out as simply and vividly as possible the exact grammatical workings of this architectural language. He is less concerned with its development in Greece and Rome than with its expansion and use in the centuries since the Renaissance. He explains the vigorous discipline of the orders and the scope of rustication, the dramatic deviations of the Baroque and in the last chapter the relationship between the classical tradition and the modern architecture of today. The book is intended for anybody who cares for architecture but more specifically for students beginning a course in the history of architecture to whom a guide to the classical rules will be an essential companion.

**The Classical Language of Architecture** John Summerson, 1982      [The Classical Language of Architecture](#) John Summerson, 1977      [The Classical Language of Architecture](#) John Summerson, Alan Powers, 2023-09-07 Derived from the principles of Greek and Roman architecture in antiquity, the classical style has long dominated the history of western architecture from the Renaissance to the present. Sir John Summerson's timeless text as relevant today as it was when first published distils the visual language of architecture into its core classical elements and illustrates that building throughout the ages expresses an awareness of the grammar of style and its rules even if they vary, break or poetically contradict them. From the original edifices of Greece and Rome to the recapitulations and innovations of the Renaissance, the explosive rhetoric of the Baroque to the grave statements of Neo-classicism and finally the exuberant eclecticism of the Victorians and Edwardians to the stripped Neo-classicism of some of the moderns, Summerson explains how every period has employed classical language to make their statement. With a new introduction by academic and architectural historian Alan Powers, this introduction continues to be one of the defining texts on the subject and is essential reading for all students of architecture.

*The birth of modern London*, 2021-02-23 The period 1660 1720 saw the foundation of modern London The city was transformed post Fire from a tight warren of medieval timber framed buildings into a vastly expanded regularised landscape of brick houses laid out in squares and spacious streets This work for the first time examines in detail the building boom and the speculative developers who created that landscape It offers a wealth of new information on their working practices the role of craftsmen and the design thinking which led to the creation of a new prototype for English housing The book concentrates on the mass produced houses of the middling sort which saw the adoption of classicism on a large scale in this country for the first time McKellar shows however that the new city maintained a surprising degree of continuity with existing patterns of urban used and traditional architecture The book presents the late seventeenth and the early eighteenth century as a distinct phase in London s architectural development and offers a radical reinterpretations of the adoption of Renaissance styles and ideas at the level of the everyday challenging conventional interpretations of their use and reception in this country

*An Architecture of Invitation* Sarah Menin, Stephen Kite, 2018-12-13 First published in 2005 An Architecture of invitation Colin St John Wilson is a distinctive study of the life and architectural career of one of the most significant makers theorists and teachers of architecture to have emerged in England in the second half of the twentieth century Exceptionally in an architectural study this book interweaves biography critical analysis of the projects and theory in its aims of explicating the richness of Wilson s body of work thought and teaching Drawing on the specialisms of its authors it also examines the

creative and psychological impulses that have informed the making of the work an oeuvre whose experiential depth is recognised by both users and critics      The Baroque in Architectural Culture, 1880-1980 Andrew Leach, John Macarthur, 2016-03-09 In his landmark volume *Space Time and Architecture* Sigfried Giedion paired images of two iconic spirals Tatlin's Monument to the Third International and Borromini's dome for Sant Ivo alla Sapienza The values shared between the baroque age and the modern were thus encapsulated on a single page spread As Giedion put it writing of Sant Ivo Borromini accomplished the movement of the whole pattern from the ground to the lantern without entirely ending even there And yet he merely groped towards that which could be completely effected in modern architecture achieving the transition between inner and outer space The intellectual debt of modern architecture to modernist historians who were ostensibly preoccupied with the art and architecture of earlier epochs is now widely acknowledged This volume extends this work by contributing to the dual projects of the intellectual history of modern architecture and the history of architectural historiography It considers the varied ways that historians of art and architecture have historicized modern architecture through its interaction with the baroque a term of contested historical and conceptual significance that has often seemed to shadow a greater contest over the historicity of modernism Presenting research by an international community of scholars this book explores through a series of cross sections the traffic of ideas between practice and history that has shaped modern architecture and the academic discipline of architectural history across the long twentieth century The editors use the historiography of the baroque as a lens through which to follow the path of modern ideas that draw authority from history In doing so the volume defines a role for the baroque in the history of architectural historiography and in the history of modern architectural culture
