Sixth Canadian Conference On General Relativity And Relativistic Astrophysics:

The Sixth Canadian Conference on General Relativity and Relativistic Astrophysics Stephen Paul Braham, Jack David Gegenberg, Robert James McKellar, 1997 This volume is the refereed proceedings of the Sixth Canadian Conference on General Relativity and Relativistic Astrophysics held in May 1995 at the University of New Brunswick The book includes invited talks and contributed talks and posters including state of the art reviews of many of the most recent important developments in gravitational physics This book would serve as a good supplement to standard texts on the topic It features review articles in key areas black holes numerical relativity etc contributions covering most of gravitational physics useful articles for students who wish to begin exploring the issues discussed and invited talks given by researchers known for their ability to communicate their expertise *The Sixth Canadian Conference on General Relativity and Relativistic Astrophysics* Canadian Conference on General Relativity and Relativistic Astrophysics, 2012 General Relativity And Relativistic Astrophysics - Proceedings Of The 5th Canadian Conference Robert B Mann, Raymond G McLenaghan, 1994-08-31 This volume contains up to date accounts of many of the latest developments in gravitation cosmology and astrophysics including papers on black hole radiation empirical tests of gravitational theory quantum gravity classical and quantum cosmology singularities computational methods and a number of other topics The keynote speakers include S Carlip M Haugan A Linde D Page G Papini K Schleich P Szekeres G Starkman and J York The Arnoldfest Vladimir Igorevich Arnol'd, 1999 This volume presents articles originating from invited talks at an exciting international conference held at The Fields Institute in Toronto celebrating the sixtieth birthday of the renowned mathematician Vladimir Arnold Experts from the world over including several from Arnold's school gave illuminating talks and lively poster sessions The presentations focused on Arnold's main areas of interest singularity theory the theory of curves symmetry groups dynamical systems mechanics and related areas of mathematics The book begins with notes of three lectures by V Arnold given in the framework of the Institute's Distinguished Lecturer program The topics of the lectures are 1 From Hilbert's Superposition Problem to Dynamical Systems 2 Symplectization Complexification and Mathematical Trinities 3 Topological Problems in Wave Propagation Theory and Topological Economy Principle in Algebraic Geometry Arnold's three articles include insightful comments on Russian and Western mathematics and science Complementing the first is Jurgen Moser's Recollections concerning some of the history of KAM theory **Colliding Plane Waves in General Relativity** J.B. Griffiths, 2016-03-15 This monograph is a survey of recent research on the collision and interaction of gravitational and electromagnetic waves a topic of particular importance to general relativity 1991 edition with updated postscript *Literature 1988, Part 1* U. Esser, H. Hefele, Inge Heinrich, W. Hofmann, D. Krahn, V. R. Matas, Dr. Lutz D. Schmadel, G. Zech, 2013-11-11 From the reviews *Astronomy and Astrophysics Abstracts* has appeared in semi annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal

in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world Space Science Reviews 1 Dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts Fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes The Observatory Magazine 2 *Reflections on Spacetime* Ulrich Majer, Heinz-Jürgen Schmidt, 2013-03-14 REFLECTIONS ON SPACETIME FOUNDATIONS PHILOSOPHY AND HISTORY During the academic year 1992/93 an interdisciplinary research group constituted itself at the Zentrum für interdisziplinäre Forschung ZiF in Bielefeld Germany under the title Semantical Aspects of Spacetime Theories in which philosophers and physicists worked on topics in the interpretation and history of relativity theory The present issue consists of contributions resulting from material presented and discussed in the group during the course of that year The scope of the papers ranges from rather specialised issues arising from general relativity such as the problem of referential indeterminacy to foundational questions regarding spacetime in the work of Carnap, Weyl and Hilbert It is well known that the General Theory of Relativity (GTR) admits spacetime models which are exotic in the sense that observers could travel into their own past This poses a number of problems for the physical interpretation of GTR which are also relevant in the philosophy of spacetime It is not enough to exclude these exotic models simply by stating that we live in a non-exotic universe because it might be possible to operate time machines by actively changing the topology of the future part of spacetime In his contribution Earman first reviews the attempts of physicists to prove chronology protection theorems (CPTs) which exclude the operation of time machines under reasonable assumptions Black Holes Lawrence A. Jameson, 2002 *A Relativist's Toolkit* Eric Poisson, 2004-05-06 This 2004 textbook fills a gap in the literature on general relativity by providing the advanced student with practical tools for the computation of many physically interesting quantities The context is provided by the mathematical theory of black holes one of the most elegant, successful and relevant applications of general relativity Among the topics discussed are congruences of timelike and null geodesics, the embedding of spacelike, timelike and null hypersurfaces in spacetime and the Lagrangian and Hamiltonian formulations of general relativity Although the book is self-contained it is not meant to serve as an introduction to general relativity Instead it is meant to help the reader acquire advanced skills and become a competent researcher in relativity and gravitational physics The primary readership consists of graduate students in gravitational physics It will also be a useful reference for more seasoned researchers working in this field **Mathematical Reviews**, 1998
