Pharmacology and Treatment of Substance Abuse Lee M. Cohen, Frank L. Collins, Jr., Alice Young, Dennis E. McChargue, Thad R. Leffingwell, Katrina L. Cook, 2013-03 Given the prevalence of substance abuse in general clinical populations it is important for healthcare providers to have knowledge and skill in the treatment of these problems Evidence Based Practice EBP involves the integration of the best evidence with clinical expertise and patient values This text is designed as a bridge for practitioners that will provide up to date evidence reviews as well as information on how to best keep up with emerging trends in the field The editors have gathered expert authors to provide a much needed summary of the current status of the evidence based practice for both the assessment and treatment of specific substance use disorders

Smoking David Krogh, 2025-08-22 What compels millions of people to ignore the medical evidence and continue smoking David Krogh offers some fascinating and surprising answers in this critically acclaimed analysis of what doctors and scientists know about the passion for tobacco This feisty and provocative work gives smokers ex smokers non smokers or anyone captivated by the quirkiness of human behavior a better understanding of this complex deep rooted habit and in a broader context drug use of any kind **The Physiology of Psychological Disorders** James G. Hollandsworth Jr., 2013-11-11 Explanations of abnormal behavior that emphasize the importance of physiological determinants of disorder are relatively unpopular among psychologists especially among those who work as clinicians in an applied setting The reasons for this are theoretical and historical as well as practical Physiology and its associated biological disciplines of biochemistry pharmacology and genetics are traditionally more associated with medicine their use to underpin explanations and treatments of behavioral abnormality has consequently demanded knowledge to which most psychologists are not exposed and skills that are unavailable to them The dichotomy thus created between medical and psychological approaches has caused many psychologists to disregard physiological factors Even when the latter are recognized as important many psychologists have been unwilling to admit to the fact in the belief that by doing so they will commit themselves to an overly medical model of psychological disorder undermining what they see as preferred views of abnormality As I have become increasingly aware in following the progress of this book in the United States the theoretical issues in this debate have been further sharpened by professional rivalries present but less explicit on the European scene from which I write between medical and nonmedical health care workers regarding facilities for and approaches to the treatment of the mentally disturbed Faced with these divisions of interest psychologists have available two courses of action **Smoking** David G.

Gilbert,2014-06-03 Personality psychopathology and emotional factors are intimately related to smoking yet there are few efforts to integrate relevant findings in these areas Taking a comprehensive current and detailed view this text develops an empirically based model that reflects the multi dimensional individual difference related causal paths associated with smoking and its reinforcing and affect modulating effects Starting with a review of models of smoking motivation this volume then goes on to discuss effect and emotion and the nature biological bias and relationships among personality temperament and psychopathology Other chapters focus attention on questions of when in whom and what mechanisms promote and reinforce smoking and tobacco use such as gender differences Utilising the findings of these chapters the integrative biopsychosocial STAR Model Of Smoking Effects And Motivation Is Presented And Its Implications are examined As the percentage of smokers in the general population decreases a growing number of those continuing to smoke will be even more difficult to reach Such individuals will benefit from the individualised and intensive interventions suggested here This text is intended to be of use to psychologists psychiatrists physicians epidemiologists sociologists and other health professionals
