Pointwise Variable Anisotropic Function Spaces on Rn Shai Dekel,2022-04-04 Spaces of homogeneous type were introduced as a generalization to the Euclidean space and serve as a suffi cient setting in which one can generalize the classical isotropic Harmonic analysis and function space theory This setting is sometimes too general and the theory is limited Here we present a set of fl exible ellipsoid covers of Rn that replace the Euclidean balls and support a generalization of the theory with fewer limitations **Time–Frequency and Time–Scale Methods** Jeffrey A. Hogan,2007-12-21 Developed in this book are several deep connections between time frequency Fourier Gabor analysis and time scale wavelet analysis emphasizing the powerful adaptive methods that emerge when separate techniques from each area are properly assembled in a larger context While researchers at the forefront of developments in time frequency and time scale analysis are well aware of the benefits of such a unified approach there remains a knowledge gap in the larger community of practitioners about the precise strengths and limitations of Fourier Gabor analysis versus wavelets This book fills that gap by presenting the interface of time frequency and time scale methods as a rich area of work *The Mathematical Heritage of Guido Weiss* Eugenio Hernández,Marco Maria Peloso,Fulvio Ricci,Fernando Soria,Anita Tabacco,2025-01-31 This work is a tribute to the life and work of Guido Weiss a mathematician whose profound contributions shaped the field of harmonic analysis over a span of more than six decades His groundbreaking research from pioneering real and complex analysis to his later work on wavelets continues to influence generations of scholars More than just a researcher Guido was a mentor collaborator and friend to many creating a global community of mathematicians His charisma and generosity fostered lasting professional and personal connections across continents touching lives far beyond academia This volume features

contributions of collaborators students and colleagues of Guido who had a particularly intense relationship with him From a heartfelt remembrance of Guido Weiss to advanced discussions on spectral synthesis and wavelet theory this collection contains a diverse landscape of mathematical results Readers will delve into topics such as the compactness of bilinear commutators the intricacies of analytic families in extrapolation theory and the intersections of time frequency analysis with modern learning techniques With contributions to Hardy spaces Haar multipliers and crystalline measures this book serves both as a tribute to past achievements and a beacon for future exploration   Collectanea Mathematica ,   **Spectral Decomposition of a Covering of $GL(r)$: the Borel case** Heng Sun,2002 Let F be a number field and bf A the ring of adeles over F Suppose overline G bf A is a metaplectic cover of G bf A GL r bf A which is given by the n th Hilbert symbol on bf A   **Twentieth Century Harmonic Analysis** J.S. Byrnes,2001-09-30 Almost a century ago harmonic analysis entered a still continuing Golden Age with the emergence of many great masters throughout Europe They created a wealth of profound analytic methods to be successfully exploited and further developed by succeeding generations This flourishing of harmonic analysis is today as lively as ever as the papers presented here demonstrate In addition to its own ongoing internal development and its basic role in other areas of mathematics physics and chemistry financial analysis medicine and biological signal processing harmonic analysis has made fundamental contributions to essentially all twentieth century technology based human endeavours including telephone radio television radar sonar satellite communications medical imaging the Internet and multimedia This ubiquitous nature of the subject is amply illustrated The book not only promotes the infusion of new mathematical tools into applied harmonic analysis but also to fuel the development of applied mathematics by providing opportunities for young engineers mathematicians and other scientists to learn more about problem areas in today s technology that might benefit from new mathematical insights   **The Rational Function Analogue of a Question of Schur and Exceptionality of Permutation Representations** Robert M. Guralnick,Peter Müller,Jan Saxl,2003 Investigates the analogous question for rational functions This book describes the Galois theoretic translation based on Chebotarev s density theorem leads to a certain property of permutation groups called exceptionality   **Approximation and Entropy Numbers of Volterra Operators with Application to Brownian Motion** Mikhail Anatolʹevich Lifshit︠s︡,Werner Linde,2002 This text considers a specific Volterra integral operator and investigates its degree of compactness in terms of properties of certain kernel functions In particular under certain optimal integrability conditions the entropy numbers e_n T_ rho psi satisfy c_1 norm rho psi _r0   **Elliptic Partial Differential Operators and Symplectic Algebra** William Norrie Everitt,L. Morgan,2002 This text describes the components of the moduli space of conjugacy classes of commuting pairs and triples of elements in a compact Lie group This description is in the extended Dynkin diagram of the simply connected cover together with the co root integers and the action of the fundamental group In the case of three commuting elements we compute Chern Simons invariants associated to the corresponding flat bundles over the three torus and verify a conjecture of Witten which reveals a surprising symmetry involving the Chern Simons invariants and the dimensions of the components of the moduli space **Mathematical Reviews** ,2003 **On Central Critical Values of the Degree Four L-functions for $\mathrm {GSp}(4)$: The Fundamental Lemma** Masaaki Furusawa,Joseph A. Shalika,2003 Proves two equalities of local Kloosterman integrals on mathrm GSp left 4 right the group of 4 by 4 symplectic similitude matrices This book conjectures that both of Jacquet s relative trace formulas for the central critical values of the L functions for mathrm g1 left 2 right in J1 and J2 **Basic Global Relative Invariants for Homogeneous Linear Differential Equations** Roger Chalkley,2002 Given any fixed integer m ge 3 the author presents simple formulas for m 2 algebraically independent polynomials over mathbb Q having the remarkable property with respect to transformations of homogeneous linear differential equations of order m that each polynomial is both a semi invariant of the first kind with respect to changes of the dependent variable and a semi invariant of the second kind with respect to changes of the independent variable These relative invariants are suitable for global studies in several different contexts and do not require Laguerre Forsyth reductions for their evaluation In contrast all of the general formulas for basic relative invariants that have been proposed by other researchers during the last 113 years are merely local ones that are either much too complicated or require a Laguerre Forsyth reduction for each evaluation The Lifted Root Number Conjecture and Iwasawa Theory Jürgen Ritter,Alfred Weiss,2002 This paper concerns the relation between the

Lifted Root Number Conjecture as introduced in GRW2 and a new equivariant form of Iwasawa theory A main conjecture of equivariant Iwasawa theory is formulated and its equivalence to the Lifted Root Number Conjecture is shown subject to the validity of a semi local version of the Root Number Conjecture which itself is proved in the case of a tame extension of real abelian fields **On the Splitting of Invariant Manifolds in Multidimensional Near-Integrable Hamiltonian Systems** Pierre Lochak,J.-P. Marco,D. Sauzin,2003 Presents the problem of the splitting of invariant manifolds in multidimensional Hamiltonian systems stressing the canonical features of the problem This book offers introduction of a canonically invariant scheme for the computation of the splitting matrix
