Statistical Methods in Software Engineering Nozer D. Singpurwalla, Simon P. Wilson, 2012-12-06 This preface pertains to three issues that we would like to bring to the attention of the readers our objectives our intended audience and the nature of the material We have in mind several objectives The first is to establish a framework for dealing with uncertainties in software engineering and for using quantitative measures for decision making in this context The second is to bring into perspective the large body of work having statistical content that is relevant to software engineering which may not have appeared in the traditional outlets devoted to it Connected with this second objective is a desire to streamline and organize our own thinking and work in this area Our third objective is to provide a platform that facilitates an interface between computer scientists and statisticians to address a class of problems in computer science It appears that such an interface is necessary to provide the needed synergism for solving some difficult problems that the subject poses Our final objective is to serve as an agent for stimulating more cross disciplinary research in computer science and statistics To what extent the material here will meet our objectives can only be assessed with the passage of time Our intended audience is computer scientists software engineers and reliability analysts who have some exposure to probability and statistics Applied statisticians interested in reliability problems are also a segment of our intended audience

**Information Criteria and Statistical Modeling** Sadanori Konishi, Genshiro Kitagawa, 2008 Statistical modeling is a critical tool in scientific research This book provides comprehensive explanations of the concepts and philosophy of statistical modeling together with a wide range of practical and numerical examples The authors expect this work to be of great value not just to statisticians but also to researchers and practitioners in various fields of research such as information science computer science engineering bioinformatics economics marketing and environmental science It is a crucial area of study as statistical models are used to understand phenomena with uncertainty and to determine the structure of complex systems They are also used to control such systems as well as to make reliable predictions in various natural and social science fields

**Linear and Generalized Linear Mixed Models and Their Applications** Jiming Jiang, 2007-05-30 Over the past decade there has been an explosion of developments in mixed effects models and their applications This book concentrates on two major classes of mixed effects models linear mixed models and generalized linear mixed models with the intention of offering an up to date account of theory and methods in the analysis of these models as well as their applications in various fields The first two chapters are devoted to linear mixed models We classify linear mixed models as Gaussian linear mixed models and non Gaussian linear mixed models There have been extensive studies in estimation in Gaussian mixed models as well as tests and confidence intervals On the other hand the literature on non Gaussian linear mixed models is much less extensive partially because of the difficulties in inference about these models However non Gaussian linear mixed models are important because in practice one is never certain that normality holds This book offers a systematic approach to inference about non Gaussian linear mixed models In

particular it has included recently developed methods such as partially observed information iterative weighted least squares and jackknife in the context of mixed models Other new methods introduced in this book include goodness of fit tests prediction intervals and mixed model selection These are of course in addition to traditional topics such as maximum likelihood and restricted maximum likelihood in Gaussian mixed models

*Correlated Data Analysis: Modeling, Analytics, and Applications* Xue-Kun Song, Peter X. -K. Song, 2007-07-27 This book covers recent developments in correlated data analysis It utilizes the class of dispersion models as marginal components in the formulation of joint models for correlated data This enables the book to cover a broader range of data types than the traditional generalized linear models The reader is provided with a systematic treatment for the topic of estimating functions and both generalized estimating equations GEE and quadratic inference functions QIF are studied as special cases In addition to the discussions on marginal models and mixed effects models this book covers new topics on joint regression analysis based on Gaussian copulas

**Model-based Geostatistics** Peter Diggle, Paulo Justiniano Ribeiro, 2007-05-26 This volume is the first book length treatment of model based geostatistics The text is expository emphasizing statistical methods and applications rather than the underlying mathematical theory Analyses of datasets from a range of scientific contexts feature prominently and simulations are used to illustrate theoretical results Readers can reproduce most of the computational results in the book by using the authors software package geoR whose usage is illustrated in a computation section at the end of each chapter The book assumes a working knowledge of classical and Bayesian methods of inference linear models and generalized linear models

**Multiple Testing Procedures with Applications to Genomics** Sandrine Dudoit, Mark J. van der Laan, 2007-12-18 This book establishes the theoretical foundations of a general methodology for multiple hypothesis testing and discusses its software implementation in R and SAS These are applied to a range of problems in biomedical and genomic research including identification of differentially expressed and co expressed genes in high throughput gene expression experiments tests of association between gene expression measures and biological annotation metadata sequence analysis and genetic mapping of complex traits using single nucleotide polymorphisms The procedures are based on a test statistics joint null distribution and provide Type I error control in testing problems involving general data generating distributions null hypotheses and test statistics

Life Distributions Albert W. Marshall, Ingram Olkin, 2007-10-13 For over 200 years practitioners have been developing parametric families of probability distributions for data analysis More recently an active development of nonparametric and semiparametric families has occurred This book includes an extensive discussion of a wide variety of distribution families nonparametric semiparametric and parametric some well known and some not An all encompassing view is taken for the purpose of identifying relationships origins and structures of the various families A unified methodological approach for the introduction of parameters into families is developed and the properties that the parameters imbue a distribution are clarified These results provide essential tools for intelligent choice of models for data analysis Many of the results given are

new and have not previously appeared in print This book provides a comprehensive reference for anyone working with nonnegative data

**Simulation and Inference for Stochastic Differential Equations** Stefano M. Iacus, 2009-04-27 This book covers a highly relevant and timely topic that is of wide interest especially in finance engineering and computational biology The introductory material on simulation and stochastic differential equation is very accessible and will prove popular with many readers While there are several recent texts available that cover stochastic differential equations the concentration here on inference makes this book stand out No other direct competitors are known to date With an emphasis on the practical implementation of the simulation and estimation methods presented the text will be useful to practitioners and students with minimal mathematical background What's more because of the many R programs the information here is appropriate for many mathematically well educated practitioners too

**Statistical Learning from a Regression Perspective** Richard A. Berk, 2008-06-14 Statistical Learning from a Regression Perspective considers statistical learning applications when interest centers on the conditional distribution of the response variable given a set of predictors and when it is important to characterize how the predictors are related to the response As a first approximation this is can be seen as an extension of nonparametric regression Among the statistical learning procedures examined are bagging random forests boosting and support vector machines Response variables may be quantitative or categorical Real applications are emphasized especially those with practical implications One important theme is the need to explicitly take into account asymmetric costs in the fitting process For example in some situations false positives may be far less costly than false negatives Another important theme is to not automatically cede modeling decisions to a fitting algorithm In many settings subject matter knowledge should trump formal fitting criteria Yet another important theme is to appreciate the limitation of one's data and not apply statistical learning procedures that require more than the data can provide The material is written for graduate students in the social and life sciences and for researchers who want to apply statistical learning procedures to scientific and policy problems Intuitive explanations and visual representations are prominent All of the analyses included are done in R

**Statistical Design and Analysis for Intercropping Experiments** Walter T. Federer, 2008-01-08 Intercropping is an area of research for which there is a desperate need both in developing countries where people are rapidly depleting scarce resources and still starving and in developed countries where more ecologically and economically sound ways of feeding ourselves must be developed The only published guidelines for conducting such research and analyzing the data have been scattered about in various journal articles many of which are hard to find This book condenses these methods and will be immensely valuable to agricultural researchers and to the statisticians who help them design their experiments and interpret their results

**Bayesian Survival Analysis** Joseph G. Ibrahim, Ming-Hui Chen, Debajyoti Sinha, 2013-03-09 Survival analysis arises in many fields of study including medicine biology engineering public health epidemiology and economics This book provides a comprehensive treatment of Bayesian survival analysis Several topics are addressed including parametric

models semiparametric models based on prior processes proportional and non proportional hazards models frailty models cure rate models model selection and comparison joint models for longitudinal and survival data models with time varying covariates missing covariate data design and monitoring of clinical trials accelerated failure time models models for multivariate survival data and special types of hierarchical survival models Also various censoring schemes are examined including right and interval censored data Several additional topics are discussed including noninformative and informative prior specifications computing posterior quantities of interest Bayesian hypothesis testing variable selection model selection with nonnested models model checking techniques using Bayesian diagnostic methods and Markov chain Monte Carlo MCMC algorithms for sampling from the posterior and predictive distributions The book presents a balance between theory and applications and for each class of models discussed detailed examples and analyses from case studies are presented whenever possible The applications are all essentially from the health sciences including cancer AIDS and the environment The book is intended as a graduate textbook or a reference book for a one semester course at the advanced masters or Ph D level This book would be most suitable for second or third year graduate students in statistics or biostatistics It would also serve as a useful reference book for applied or theoretical researchers as well as practitioners

**Chaos: A Statistical Perspective** Kung-Sik Chan, Howell Tong, 2013-03-09 It was none other than Henri Poincare who at the turn of the last century recognised that initial value sensitivity is a fundamental source of randomness For statisticians working within the traditional statistical framework the task of critically assimilating randomness generated by a purely deterministic system often known as chaos is an intellectual challenge Like some other statisticians we have taken up this challenge and our curiosity as reporters and participants has led us to investigate beyond the earlier discoveries in the field Earlier statistical work in the area was mostly concerned with the estimation of what is sometimes imprecisely called the fractal dimension During the different stages of our writing substantial portions of the book were used in lectures and seminars These include the DMV German Mathematical Society Seminar Program the inaugural session of lectures to the Crisis Points Project at the Peter Wall Institute of Advanced Studies University of British Columbia and the graduate courses on Time Series Analysis at the University of Iowa the University of Hong Kong the London School of Economics and Political Science and the Chinese University of Hong Kong We have therefore benefitted greatly from the comments and suggestions of these audiences as well as from colleagues and friends We are grateful to them for their contributions Our special thanks go to Colleen Cutler Cees Diks Barbel FinkensHidt Cindy Greenwood Masakazu Shimada Floris Takens and Qiwei Yao

LaRiccia, 2020-12-15 This book is intended for graduate students in statistics and industrial mathematics as well as researchers and practitioners in the field We cover both theory and practice of nonparametric estimation The text is novel in its use of maximum penalized likelihood estimation and the theory of convex minimization problems fully developed in the text to obtain convergence rates We also use and develop from an elementary

view point discrete parameter submartingales and exponential inequalities A substantial effort has been made to discuss computational details and to include simulation studies and analyses of some classical data sets using fully automatic data driven procedures Some theoretical topics that appear in textbook form for the first time are definitive treatments of I J Good's roughness penalization monotone and unimodal density estimation asymptotic optimality of generalized cross validation for spline smoothing and analogous methods for ill posed least squares problems and convergence proofs of EM algorithms for random sampling problems

**Scan Statistics** Joseph Glaz, Joseph Naus, Sylvan Wallenstein, 2013-03-09 In many statistical applications the scientists have to analyze the occurrence of observed clusters of events in time or space The scientists are especially interested to determine whether an observed cluster of events has occurred by chance if it is assumed that the events are distributed independently and uniformly over time or space Applications of scan statistics have been recorded in many areas of science and technology including geology geography medicine minefield detection molecular biology photography quality control and reliability theory and radio optics

*Exploring Multivariate Data with the Forward Search* Anthony C. Atkinson, Marco Riani, Andrea Cerioli, 2004-01-09 S PLUS programs for the forward search are available on a Web site This book is a companion to Atkinson and Riani's Robust Diagnostic Regression Analysis of which the reviewer for The Journal of the Royal Statistical Society wrote I read this book compulsive reading such as it was in three sittings Jacket

**Growth Curve Models and Statistical Diagnostics** Jian-Xin Pan, Kai-Tai Fang, 2012-11-06 Growth curve models are generalized multivariate analysis of variance models These models are especially useful for investigating growth problems on short times in economics biology medical research and epidemiology This book systematically introduces the theory of the GCM with particular emphasis on their multivariate statistical diagnostics which are based mainly on recent developments made by the authors and their collaborators The authors provide complete proofs of theorems as well as practical data sets and MATLAB code

**Statistical Inference for Ergodic Diffusion Processes** Yury A. Kutoyants, 2013-03-09 The first

book in inference for stochastic processes from a statistical rather than a probabilistic perspective It provides a systematic exposition of theoretical results from over ten years of mathematical literature and presents for the first time in book form many new techniques and approaches

**Principal Component Analysis** I.T. Jolliffe, 2006-05-09 Principal component analysis is central to the study of multivariate data Although one of the earliest multivariate techniques it continues to be the subject of much research ranging from new model based approaches to algorithmic ideas from neural networks It is extremely versatile with applications in many disciplines The first edition of this book was the first comprehensive text written solely on principal component analysis The second edition updates and substantially expands the original version and is once again the definitive text on the subject It includes core material current research and a wide range of applications Its length is nearly double that of the first edition Researchers in statistics or in other fields that use principal component analysis will find that the book gives an authoritative yet accessible account of the subject It is also a valuable resource for

graduate courses in multivariate analysis The book requires some knowledge of matrix algebra Ian Jolliffe is Professor of Statistics at the University of Aberdeen He is author or co author of over 60 research papers and three other books His research interests are broad but aspects of principal component analysis have fascinated him and kept him busy for over 30 years

*Functional Data Analysis* James Ramsay, B. W.
