University during the week of July 8-12 1985 was to enable biologists and probabilists from Japan and the U S to discuss the
latest developments in their respective fields and to exchange ideas on the applicability of the more recent developments in
stochastic process theory to problems in biology Eighteen papers were presented at the Workshop and have been grouped
under the following headings I Population genetics five papers II Measure valued diffusion processes related to population
genetics three papers III Neurophysiology two papers IV Fluctuation in living cells two papers V Mathematical methods
related to other problems in biology epidemiology population dynamics etc six papers An important feature of the Workshop
and one of the reasons for organizing it has been the fact that the theory of stochastic differential equations SDE s has found
a rich source of new problems in the fields of population genetics and neuro biology This is especially so for the relatively
new and growing area of infinite dimensional i e measure valued or distribution valued SDE s The papers in II and III and
some of the papers in the remaining categories represent these areas
