6.5 Stochastic Prog. and Benders' decomposition

❑ Two stage stochastic linear program:

Two sets of decisions (x, y) that are made in consecutive stages. Some exogenous parameters that influence the second stage decision making is uncertain and only can be known after the first set of decisions has been made. Best two stage decisions that minimize the total expected cost?

Large linear program if the number of possible second stage scenarios is large. Use Benders' decomposition. Benders' decomposition was developed to solve mixed integer programs, but it can be applied here too. Use strong duality of LP cleverly.

Stochastic Linear Programming Peter Kall,János Mayer,2005-07-25 Peter Kall and J nos Mayer are distinguished scholars and professors of Operations Research and their research interest is particularly devoted to the area of stochastic optimization Stochastic Linear Programming Models Theory and Computation is a definitive presentation and discussion of the theoretical properties of the models the conceptual algorithmic approaches and the computational issues relating to the implementation of these methods to solve problems that are stochastic in nature The application area of stochastic programming includes portfolio analysis financial optimization energy problems random yields in manufacturing risk analysis etc In this book models in financial optimization and risk analysis are discussed as examples including solution methods and their implementation Stochastic programming is a fast developing area of optimization and mathematical programming Numerous papers and conference volumes and several monographs have been published in the area however the Kall and Mayer book will be particularly useful in presenting solution methods including their solid theoretical basis and their computational issues based in many cases on implementations by the authors The book is also suitable for advanced courses in stochastic optimization **Introduction to Stochastic Programming** John R. Birge,François Louveaux,2011-06-15 The aim of stochastic programming is to find optimal decisions in problems which involve uncertain data This field is currently developing rapidly with contributions from many disciplines including operations research mathematics and probability At the same time it is now being applied in a wide variety of subjects ranging from agriculture to financial planning and from industrial engineering to computer networks This textbook provides a first course in stochastic programming suitable for students with a basic knowledge of linear programming elementary analysis and probability The authors aim to present a broad overview of the main themes and methods of the subject Its prime goal is to help students develop an intuition on how to model uncertainty into mathematical problems what uncertainty changes bring to the decision process and what techniques help to manage uncertainty in solving the problems In this extensively updated new edition there is more material on methods and examples including several new approaches for discrete variables new results on risk measures in modeling and Monte Carlo sampling methods a new chapter on relationships to other methods including approximate dynamic programming robust optimization and online methods The book is highly illustrated with chapter summaries and many examples and exercises Students researchers and practitioners in operations research and the optimization area will find it particularly of interest Review of First Edition The discussion on modeling issues the large number of examples used to illustrate the material and the breadth of the coverage make Introduction to Stochastic Programming an ideal textbook for the area Interfaces 1998 *Stochastic Programming* András Prékopa,2013-03-09 Stochastic programming the science that provides us with tools to design and control stochastic systems with the aid of mathematical programming techniques lies at the intersection of statistics and mathematical programming The book Stochastic Programming is a comprehensive

Giannessi,Sándor Komlósi,Tamás Rapcsák,2013-11-11 Though the volume covers 22 papers by 36 authors from 12 countries the history in the background is bound to Hungary where in 1973 Andras Pn kopa started to lay the foundation of a scientific forum which can be a regular meeting spot for experts of the world in the field Since then there has been a constant interest in that forum Headed at present by Tamas Rapcsak the Laboratory of Operations Research and Decisions Systems of the Computer and Automation Institute Hungarian Academy of Sciences followed the tradition in every respect namely conferences were organized almost in every second year and in the same stimulating area in the Matra mountains The basic fields were kept providing opportunities for the leading personalities to give voice to their latest results The floor has been widened recently for the young generation ensuring this way both a real

location for the past present and future experts to meet and also the possibility for them to make the multicoloured rainbow of the fields unbroken and continuous The volume is devoted to the memory of Steven Vajda one of the pioneers on mathematical programming born is Hungary In 1992 he took part in the XIth International Conference on Mathematical Programming at Matrafiired where with his bright personality he greatly contributed to the good spirituality of the event We thank Jakob Krarup for his reminiscence on the life and scientific activities of late Steven Vajda **Mathematical Programming for Industrial Engineers** Mordecai Avriel,Boaz Golany,1996-05-16 Setting out to bridge the gap between the theory of mathematical programming and the varied real world practices of industrial engineers this work introduces developments in linear integer multiobjective stochastic network and dynamic programing It details many relevant industrial engineering applications College or university bookstores may order five or more copies at a special student price available upon request from Marcel Dekker Inc *Mathematical Programming The State of the Art* A. Bachem,M. Grötschel,B.
