**force between magnets wikipedia** - May 11 2023

magnets exert forces and torques on each other through the interaction of their magnetic fields the forces of attraction and  
repulsion are a result of these interactions the magnetic field of each magnet is due to microscopic currents of electrically  
charged electrons orbiting nuclei and the intrinsic magnetism of fundamental particles such as electrons that make up the  
material both of these are modeled quite well as tiny loops of current called magnetic dipoles that produce their o
