web mathematically it is computed using the following equation power work time or $P = \frac{W}{t}$ the standard metric unit of power is the watt as is implied by the equation for power a unit of power is equivalent to a unit of work divided by a unit of time thus a watt is equivalent to a joule second

work and energy review with answers 1 the physics classroom - Jun 05 2023

web 1 which of the following statements are true about work include all that apply work is a form of energy a watt is the standard metric unit of work units of work would be equivalent to a newton times a meter a $\text{kg m}^2 \text{s}^{-2}$ would be a unit of work work is a time based quantity it is dependent upon how fast a force displaces an object

potential energy the physics classroom - Apr 03 2023

web power an object can store energy as the result of its position for example the heavy ball of a demolition machine is storing energy when it is held at an elevated position this stored energy of position is referred to as potential energy similarly a drawn bow is able to store energy as the result of its position

work and energy review with answers 2 physics classroom - Oct 29 2022

web answer a for any given situation the work done by a force can be calculated using the equation $W = F d \cos \theta$ where F is the force doing the work d is the displacement of the object and θ is the angle between the force and the displacement
