Turning Points in Japanese History Bert Edstrom, 2013-12-16 So called turning points or defining moments are both the oxygen and grid lines that historians and researchers seek in plotting the path of social and political development of any country In the

Rome and The Guidebook Tradition Anna Blennow, Stefano Fogelberg Rota, 2019-04-01 To this day no comprehensive academic study of the development of guidebooks to Rome over time has been performed This book treats the history of guidebooks to Rome from the Middle Ages up to the early twentieth century It is based on the results of the interdisciplinary research project Topos and Topography led by Anna Blennow and Stefano Fogelberg Rota From the case studies performed within the project it becomes evident that the guidebook as a phenomenon was formed in Rome during the later Middle Ages and early Renaissance The elements and rhetorical strategies of guidebooks over time have shown to be surprisingly uniform with three important points of development a turn towards a more user friendly structure from the seventeenth century and onward the so called Baedeker effect in the mid nineteenth century and the introduction of a personalized guiding voice in the first half of the twentieth century Thus the guidebook tradition is an unusually consistent literary oeuvre which also forms a warranty for the authority of every new guidebook In this respect the guidebook tradition is intimately associated with the city of Rome with which it shares a constantly renovating yet eternally fixed nature **Ladies in the Laboratory**

**II** Mary R.S. Creese, 2004-05-17 A survey of nineteenth century women whose journal publications are listed in the 19 volume London Royal Society's Catalogue of scientific papers 1800 1900 comprising an author index to scientific papers contained in the transactions of societies journals and other periodical works being the major index of scientific journal literature for the period The Oxford Handbook of the History of Eugenics Alison Bashford, Philippa Levine, 2010-08-03 Eugenic thought and

practice swept the world from the late nineteenth to the mid twentieth century in a remarkable transnational phenomenon Eugenics informed social and scientific policy across the political spectrum from liberal welfare measures in emerging social democratic states to feminist ambitions for birth control from public health campaigns to totalitarian dreams of the perfectibility of man This book dispels for uninitiated readers the automatic and apparently exclusive link between eugenics and the Holocaust It is the first world history of eugenics and an indispensable core text for both teaching and research Eugenics has accumulated generations of interest as experts attempted to connect biology human capacity and policy In the past and the present eugenics speaks to questions of race class gender and sex evolution governance nationalism disability

and the social implications of science In the current climate in which the human genome project stem cell research and new reproductive technologies have proven so controversial the history of eugenics has much to teach us about the relationship between scientific research technology and human ethical decision making

**History of Nordic Computing** Janis Bubenko, John Impagliazzo, Arne Soelvig, 2005-12-28 Computing in the Nordic countries started in late 1940s mainly as an engineering activity to build computing devices to perform mathematical calculations and assist mathematicians and engineers in scientific problem solving The early computers of the Nordic countries emerged during the 1950s and had names like BARK BESK DASK SMIL SARA ESKO and NUSSE Each of them became a nucleus in institutes and centres for mathematical computations programmed and used by highly qualified professionals However one should not forget the punched card machine technology at this time that had existed for several decades In addition we have a Nordic name namely Frederik Rosing Bull contributing to the fundamentals of punched card technology and forming the French company Bull Commercial products such as FACIT EDB and SAAB D20 series computers in Sweden the Danish GIER computer the Nokia MIKKO computer in Finland as well as the computers of Norsk Data in Norway followed the early computers In many cases however companies and institutions did not further develop or exploit Nordic computing hardware even though it exhibited technical advantages Consequently in the 1970s US computers primarily from IBM flooded the Nordic market

**The Soybean Through World History** Matilda Baraibar Norberg, Lisa Deutsch, 2023-06-30 This book examines the changing roles and functions of the soybean throughout world history and discusses how this reflects the complex processes of agrofood globalization The book uses a historical lens to analyze the processes and features that brought us to the current global configuration of the soybean commodity chain From its origins as a peasant food in ancient China today the protein rich soybean is by far the most cultivated biotech crop on Earth used to make a huge variety of food and industrial products including animal feed tofu cooking oil soy sauce biodiesel and soap While there is a burgeoning amount of literature on how the contemporary global soy web affects large tracts of our planet's social ecological systems little attention has been given to the questions of how we got here and what alternative roles the soybean has played in the past This book fills this gap and demonstrates that it is impossible to properly comprehend the contemporary global soybean chain or the wider agrofood system of which it is a part without looking at both their long and short historical development However a history of the soybean and its changing roles within equally changing agrofood systems is inexorably a history about globalization Not only does this book map out where soybeans are produced but also who governs wields power and accumulates capital in the entire commodity chain from inputs in production to consumption as well as identifying the institutional context the global commodity chain operates within The book concludes with a discussion of the main challenges and contradictions of the current soy regime that could trigger its rupture and end This book is essential reading for students practitioners and scholars interested in agriculture and food systems global commodity chains globalization environmental history economic

history and social ecological systems      **Fashion Aesthetics and Ethics** Louise Wallenberg, Andrea Kollnitz, 2023-05-04  
How are aesthetics and ethics related to the practical realities of the global fashion industry Both have played an important role in academic fashion studies to this point but they are most often discussed in the context of abstract phenomena such as modernity and capitalism or identity issues such as sexuality class and gender The essays in this volume strive instead to show how the realities of the global fashion industry have important and pertinent aesthetic and ethical consequences This collection provides critical and philosophical analysis of the interplay of aesthetics and ethics within the global fashion industry Characterized by an increasingly fast spinning production the industry is highly exploitative in terms of environment and labor force underpaid textile workers retailers working under brutal competition from the mass merchandise discounters young designers seamstresses and curators often working for free and a vast body of aspiring models In addition fashion related aesthetic ideals are becoming more influential than ever in directing consumers in their social and personal identification processes and bodily practices with sometimes fatal consequences Covering a wide range of subjects such as fashion s highly problematic production and consumption practices the possibility of producing and consuming fashion ethically fashion s intimate connection with nature and technology Fashion Aesthetics and Ethics highlights the powerful aesthetical presence of fashion in relation to its ethical premises and often problematic outcomes      **Animal Industries** Taina Syrjämaa, Marja Jalava, Taija Kaarlenkaski, Otto Latva, Eeva Nikkilä, Tuomas Räsänen, 2024-04-01 This book examines an extremely topical phenomenon the massive industrial exploitation of animals from a previously neglected perspective It explores the history and development of animal industries in Nordic countries from their establishment in the late nineteenth century to the present day These countries are often considered to be progressive and advanced in animal protection but consumption practices in this area are actually excessive in relation to planetary resources and are among the most unsustainable on a global scale If we want to understand current problems it is essential to be aware of long term changes and continuities as well as the diversity of animals that have been exploited The purpose of this book is to explain these changes and provide new knowledge for scholars in human animal studies decisionmakers and the general public

*Economic Theory in the Twentieth Century, An Intellectual History—Volume II* Roberto Marchionatti, 2021-09-13 This book set out over three volumes provides a comprehensive history of economic thought in the 20th century with special attention to the cultural and historical background in the development of theories to the leading or the peripheral research communities and their interactions and finally to an assessment and critical appreciation of economic theories Volume II addresses economic theory in the period between the two world wars in which the economic theory went through a process of criticism of old mainstream deconstruction and reconstruction and theoretical ferment which involved the intellectual communities of economists emphasizing their nature of evolving interacting entities This work provides a significant and original contribution to the history of economic thought and gives insight to the thinking of some of the major international

figures in economics It will appeal to students scholars and the more informed reader wishing to further their understanding of the history of the discipline      *Song Lyrics and Literary History* Gunilla Hermansson, 2025-06-12 Paving new paths for the study of the history of literature this study explores the intricate networks of one single poem across two centuries the V rvindar friska a poem meant to be sung The Swedish song V rvindar friska Fresh Spring Breezes started its public life in 1828 between the covers of a book as a poem written to a traditional melody Since then it has been reprinted translated performed and used in the most surprising contexts in different corners of the world This particular case may be rather exceptional but Gunilla Hermansson argues that the underlying dynamics are not and yet they have been underexposed in studies of literary history This exploration of V rvindar friska reveals the rich and intricate network of one text and uncovers new facets of how people have engaged with word art in their everyday lives in the modern era This network includes untraditional yet widespread uses of poetry and lyrics in lonely hearts columns and railway work and seemingly strange bedfellows such as a constellation of Nordic folk songs and American plantation songs The afterlives of this song evoke questions concerning class gender race citizenship technology and modernity from new angles as well as theoretical and methodological questions of circulation textual instability canonization paradigmatic turns uses and misuses *Song Lyrics and Literary History* demonstrates how poetry is transformed when shared across time borders media and social and ideological divides Being attentive to poetry meant to be sung Hermansson argues opens to a fuller and more representative picture of the cultural history of literature
