Project Reliability Engineering discusses various aspects of the process of creating a web dashboard, such as network communication protocols, multithreading, and web design and data visualization. Later chapters cover configuration of the project and the machine it's running on and additional techniques for project monitoring and diagnosis. These include good logging practices, automatic log and metrics monitoring, and alerting via email and text messages. A mixture of advanced concepts forms the last chapter of the book, touching on topics such as usage of microservices in complex projects, debugging techniques for object-oriented projects, and fail-safing the project's software and hardware.
