Subcellular Biochemistry Vol 23 Physicochemical Methods In The Study Of Biomembranes:

Physicochemical Methods in the Study of Biomembranes Herwig J. Hilderson, Gregory B. Ralston, 2013-11-11 In mammalian cells many physiological processes rely on the dynamics of the organization of lipids and proteins in biological membranes The topics in this volume deal with physicochemical methods in the study of biomembranes Some of them have a long and respectable history in the study of soluble proteins and have only recently been applied to the study of membranes Some have traditionally been applied to studies of model systems of lipids of well defined composition as well as to intact membranes Other methods by their very nature apply to organized bilayers comprised of both protein and lipid Van Meer and van Genderen provide us with an introduction to the field Chapter I From their personal perspective regarding the distribution transport and sorting of membrane lipids they formulate a number of biologically relevant questions and show that the physicochemical methods described in this book may contribute in great measure to solving these issues The methods of analytical ultracentrifugation have served faithfully for 60 years in the study of water soluble proteins The use of detergent extraction of membrane proteins and the manipulation of density with H₂O D₂O mixtures has extended this technique to the study of proteins and in particular their interactions from biological membranes As described by Morris and Ralston in Chapter 2 this technique can be used to determine a number of important properties of proteins

Subcellular Biochemistry J. Robin Harris, 2013-11-11 In Volume 25 leading experts present studies on the value of increased ascorbic acid intake and explore its specific contributions to human and animal health

Phospholipid Metabolism in Apoptosis Peter J. Quinn, Valerian E. Kagan, 2006-04-18 The last few years have witnessed an explosion of both interest and knowledge about apoptosis the process by which a cell actively commits suicide The number of publications on the topic has increased from nothing in the early 1980s to more than 10 000 papers annually today It is now well recognized that apoptosis is essential in many aspects of normal development and is required for maintaining tissue homeostasis The idea that life requires death seems somewhat paradoxical but cell suicide is essential for an animal to survive For example without selective destruction of non self T cells an animal would lack immunity Similarly meaningful neural connections in the brain are whittled from a mass of cells Further developmental cell remodeling during tissue maturation involves programmed cell death as the major mechanism for functional and structural safe transition of undifferentiated cells to more specialized counterparts Apoptosis research with roots in biochemistry developmental and cell biology genetics and immunology embraces this long ignored natural law Failure to properly regulate apoptosis can have catastrophic consequences Cancer and many diseases AIDS Alzheimer's disease Parkinson's disease heart attack stroke etc are thought to arise from deregulation of apoptosis As apoptosis emerges as a key biological regulatory mechanism it has become harder and harder to keep up with new developments in this field

Biophysical Chemistry Richard H. Templer, Robin Leatherbarrow, 2002 In the post genomic world advances in the comprehension of cell behaviour will depend upon scientists deciphering the

molecular basis of interactions between proteins and membranes Bringing together contributions from chemists biologists and physicists *Biophysical Chemistry Membranes and Proteins* demonstrates how multidisciplinary teams can gain insights into understanding complex biological systems This book reflects both the scope and the interdisciplinary nature of the field with topics including modelling of biological systems membrane structure and interactions probing biomolecules and channels and receptors Full of stimulating articles and opinions readers from academia and industry will welcome the wide range of coverage and the state of the art science

Bacterial Toxins Otto Holst, 2008-02-05 The interest of investigators across a broad spectrum of scientific disciplines has been steadily stimulated by the field of bacterial toxin research an area that makes use of a large variety of biological chemical physicochemical and medically oriented approaches Researchers studying bacterial toxins need to be acquainted with all these disciplines in order to work effectively in the field To date there has been no published collection offering detailed descriptions of the techniques and methods needed by researchers operating across the field's diverse areas The present volume *Bacterial Toxins Methods and Protocols* is intended to fill this gap *Bacterial Toxins Methods and Protocols* consists of two sections one on protein toxins 15 chapters and one on endotoxins 5 chapters Each section is introduced by an overview article Chapters 1 and 16 The protocols collected represent state of the art techniques that each have high impact on future bacterial toxin research All methods are described by authors who have regularly been using the protocol in their own laboratories Included in each chapter is a brief introduction to the method being described

Calcium-Binding Protein Protocols Hans J. Vogel, 2008-02-05 Calcium plays an important role in a wide variety of biological processes This divalent metal ion can bind to a large number of proteins by doing so it modifies their biological activity or their stability Because of its distinct chemical properties calcium is uniquely suited to act as an on/off switch or as a light dimmer of biological activities The two books entitled *Calcium Binding Protein Protocols Volumes I and II* focus on modern experimental analyses and methodologies for the study of calcium binding proteins Both extracellular and intracellular calcium binding proteins are discussed in detail However proteins involved in calcium handling e.g. calcium pumps and calcium channels fall outside of the scope of these two volumes Also calcium binding proteins involved in bone deposition will not be discussed as this specific topic has been addressed previously The focus of these two books is on studies of the calcium binding proteins and their behavior in vitro and in vivo The primary emphasis is on protein chemistry and biophysical methods Many of the methods described will also be applicable to proteins that do not bind calcium *Calcium Binding Protein Protocols* is divided into three main sections The section entitled *Introduction and Reviews* provides information on the role of calcium in intracellular secondary messenger activation mechanisms Moreover unique aspects of calcium chemistry and the utilization of calcium in dairy proteins as well as calcium binding proteins involved in blood clotting are addressed

Lipid Bilayers J. Katsaras, T. Gutberlet, 2013-06-29 A general review of lipid bilayer structure and dynamics is given including such current topics as the hydration of lipid bilayers the superstructural behaviour of bilayers at different states of hydration and

external conditions the role and behaviour of lipid bilayers on fusion and rupture and the interaction of lipid bilayers with small organic molecules and additives and of protein lipid bilayer interactions In addition recent research on lipid interaction with proteins and other molecules in monolayers is reviewed and the use of highly aligned samples under biologically relevant conditions and the benefits derived from such preparations are addressed Finally the latest approach in simulation of impurities within a lipid bilayer is introduced This book will be a comprehensive review of the current state of biologically relevant model membrane systems which will become an indispensable reference for the working biophysicist

Biology of the Lysosome John B. Lloyd, Robert W. Mason, 2012-12-06 Volume 27 provides a comprehensive review of current knowledge of lysosome function in mammalian cells The book's unique contribution is its series of chapters that offers unparalleled treatment of the metabolic activities of lysosomes

Drug-Membrane Interactions Joachim K. Seydel, Michael Wiese, 2009-07-10 Barrier reservoir target site those are but some of the possible functions of biological lipid membranes in the complex interplay of drugs with the organism A detailed knowledge of lipid membranes and of the various modes of drug membrane interaction is therefore the prerequisite for a better understanding of drug action Many of today's pharmaceuticals are amphiphilic or catamphiphilic enabling them to interact with biological membranes Crucial membrane properties are surveyed and techniques to elucidate drug membrane interactions presented including computer aided predictions Effects of membrane interaction on drug action and drug distribution are discussed and numerous examples are given This unique reference volume builds on the authors long experience in the study of drug membrane interaction Recommended reading for everyone involved in pharmaceutical research

Intermediate Filaments Harald Herrmann, J. Robin Harris, 1998-09-30 Comprises 20 contributions on intermediate filament IF proteins providing a comprehensive overview of the essentials of IF research and very recent developments including many previously unpublished concepts and results Representative topics include intermediate filament organization during oogenesis and early development in the clawed frog lessons from keratin transgenic and knockout mice cytokeratins as markers of differentiation in the diagnosis of epithelial tumors vimentin and lipid metabolism and nuclear lamin binding proteins Annotation copyrighted by Book News Inc Portland OR
