Sudden Cardiac Death And Congestive Heart Failure:

Sudden Cardiac Death, An Issue of Heart Failure Clinics Raul Weiss, Emile Daoud, 2011-04-27 Sudden cardiac death SCD is the number one killer in the United States claiming the lives of more than 300 000 Americans every year Thus it is important for heart failure specialists to be knowledgeable about strategies to prevent manage risk for and treat conditions leading to sudden cardiac death These topics and more are covered in this issue **Sudden Cardiac Death and Congestive Heart Failure** J. Morganroth, E. Neil Moore, 1983-04-01 Sudden Cardiac Death and Congestive Heart Failure: Diagnosis and Treatment J. Morganroth, E. Neil Moore, 1983-04-30 In March of 1980 we organized the first symposium on how to evaluate new antiarrhythmic agents in which the participants included members of the Cardio Renal Division of the Food and Drug Administration academic investigators from the United States and Abroad and directors and implementors of pharmacological research representing the pharmaceutical industry By bringing together all three elements it was hoped that better communication and understanding would ensue to more rapidly bring new cardiac agents to the American public This goal was important since a rather limited number of antiarrhythmic agents were and are currently available to treat patients with such disorders in the United States These agents are needed not only for the treatment of patients with sustained ventricular tachyarrhythmias which produce life threatening hemodynamic consequences but also and in fact more potentially important as a prophylactic measure in the high risk patient subject to sudden cardiac death This book represents the proceedings of the third of these Symposiums whose purpose was to evaluate the clinical research methodology and models used in the evaluation of new antiarrhythmic agents for not only acute therapeutic intervention but also for the prophylaxis of sudden cardiac death In addition new devices have evolved over the past few years that can detect and treat life threatening cardiac arrhythmias and the evaluation of efficacy and safety of these devices is detailed

Sudden Cardiac Death Silvia Priori, Douglas Zipes, 2009-02-05 This book draws on the established European guidelines from the ESC that address the key issues in sudden cardiac death such as identifying individuals at risk prior to an episode of ventricular tachyarrhythmia or a sudden cardiac arrest and responding in a timely fashion to the person suffering the event out of the hospital It presents an update on what is known about sudden cardiac arrest from basic experimental studies to clinical trials and serves as a complement to the ESC Core Syllabus on this subject Topics include epidemiology genetics arrhythmogenic mechanisms risk stratification autonomic nervous system and phenotypes Disease states and special populations are also covered as well as drug device and ablation treatments and cost effectiveness All chapters are co authored by experts from both Europe and the US The ESC Education Series This book is part of the ESC Education Series The series is designed to provide medical professionals with the latest information about the understanding diagnosis and management of cardiovascular diseases Where available management recommendations are based on the established European Guidelines which encompass the best techniques to use with each cardiac disease Throughout the series the

leading international opinion leaders have been chosen to edit and contribute to the books. The information is presented in a succinct and accessible format with a clinical focus.

Sudden Cardiac Death Antonio Bayés de Luna, 1991

Sudden death is probably the greatest challenge facing modern cardiology today. This is mainly due to the impact of its brusque appearance and the socioeconomic implications. The incidence is presently decreasing somewhat, mainly due to the decline in new cases of ischemic heart disease on one hand and to better prevention in risk patients on the other. Nevertheless, the figures are still high and represent over 300 000 patients per year in the United States alone. This book is an updating of the problem of sudden death from a multifactorial standpoint. It includes not only electrophysiologic data but also covers aspects ranging from epidemiology to prevention. Risk markers and triggering mechanisms of sudden death are reviewed with special emphasis on the role of electrical instability, ischemia and depressed ventricular function. The book includes the contributions from many experts, often pioneers in their respective fields. It is our hope that the book serves as an updating for those cardiologists who are not specialized in these subjects but may also be of interest to the expert. We wish to express our sincerest gratitude to the authors for sending in their work so promptly and also Kluwer Academic Publishers for their exactitude and perfection in this edition.

Prediction of Sudden Cardiac Arrest for Patients with Congestive Heart Failure Wan Tai Au Yeung, 2016

Sudden cardiac death (SCD) is responsible for 200 000-450 000 adult deaths each year in the United States. Since sudden cardiac arrest (SCA) can happen unexpectedly, implantable cardioverter defibrillators (ICDs) are inserted into patients who are at high risk of SCA so that they can provide immediate defibrillation when SCAs occur. Even though ICDs can be life saving, there are still many problems that need to be solved. Firstly, how does one determine whether a person should receive an ICD? An ICD installed but never used is a waste of resources. On the other hand, if the patients need ICDs but do not get them, very likely they will lose their lives through SCDs. Secondly, ICDs do not prevent life-threatening cardiac arrhythmias (LTCAs) but simply terminate such arrhythmias after they have occurred. As a result, the patients suffering from these arrhythmias can be in danger if, for example, they are driving. It would be ideal if ICDs can issue warnings for impending LTCAs. Last but not least, shocks are very painful and decrease the quality of life of patients. If one can predict the onset of these

arrhythmias it may be possible to treat the patients with pacing or modulation of autonomic nervous system thus can decrease the number of shocks received by patients To solve these problems we hypothesized that the patients R R interval statistics can be used for risk stratification for SCAs and prediction of SCAs In addition algorithms from machine learning were used to predict the occurrences of SCA with R R interval statistics and demographic information of patients as features Our study sample consists of patients who enrolled in Sudden Cardiac Death Heart Failure Trial SCD HeFT Our work shows that R R interval statistics particularly the short term and long term fractal scaling exponents from detrended fluctuation analysis DFA are indeed correlated to the occurrences of SCAs Such findings certainly will aid the patient selection for receiving ICDs and will help create a new generation of ICDs which can issue warnings for the occurrences of SCAs

Sport-related sudden cardiac death Pietro Delise, Paolo Zeppilli, 2021-10-21 Sudden death in athletes is a global problem Although it is a relatively rare phenomenon 1 100 000 persons when it does occur it is often as an incomprehensible event In fact it strikes subjects who presumably should be much healthier than the general population In the previous 20 years many authors have studied this problem in an attempt to understand the causes and prevent these events and it has been determined that in the vast majority of cases athletes who die suddenly have an underlying heart disease arrhythmogenic cardiomyopathy hypertrophic cardiomyopathy coronary anomalies channelopathies etc In most cases these diseases do not produce major symptoms and do not preclude sports activity even at the highest levels although they do increase the incidence of sudden death How to discover these diseases in asymptomatic athletes is a hotly debated issue In particular there is controversy as to whether all athletes should undergo detailed medical screening including electrocardiogram or whether the costs of this screening are too high in relation to the event incidence The purpose of this book is to accurately analyze the causes of sudden death in athletes and to provide cardiologists and sports physicians with useful tips on how to identify at risk individuals
