written by an expert who's developed college level courses on data preprocessing and related subjects. With this book you'll be equipped with the optimum data preprocessing techniques from multiple perspectives ensuring that you get the best possible insights from your data. You'll learn about different technical and analytical aspects of data preprocessing: data collection, data cleaning, data integration, data reduction, and data transformation, and get to grips with implementing them using the open source Python programming environment. The hands-on examples and easy-to-follow chapters will help you gain a comprehensive articulation of data preprocessing, its whys and hows, and identify opportunities where data analytics could lead to more effective decision making. As you progress through the chapters, you'll also understand the role of data management systems and technologies for effective analytics and how to use APIs to pull data. By the end of this Python data preprocessing book, you'll be able to use Python to read, manipulate, and analyze data, perform data cleaning, integration, reduction, and transformation techniques, and handle outliers or missing values to effectively prepare data for analytic tools.

What you will learn:

- Use Python to perform analytics functions on your data.
- Understand the role of databases and how to effectively pull data from databases.
- Perform data preprocessing steps defined by your analytics goals.
- Recognize and resolve data integration challenges.
- Identify the need for data reduction and execute it.
- Detect opportunities to improve analytics with data transformation.

Who this book is for: This book is for junior and senior data analysts, business intelligence professionals, engineering undergraduates, and data enthusiasts looking to perform preprocessing and data cleaning on large amounts of data. You don't need any prior experience with data preprocessing to get started with this book. However, basic programming skills such as working with variables, conditionals, and loops, along with beginner-level knowledge of Python and simple analytics experience, are a prerequisite.

Algorithms and Applications Sajal K. Das, Nabendu Chaki, 2018-04-07. This book presents the proceedings of the Conference on Algorithms and Applications (ALAP) 2018, which focuses on various areas of computing like distributed systems, security, big data, and analytics, and very large scale integration (VLSI) design. The book provides solutions to a broad class of problems in diverse areas of algorithms in our daily lives in a world designed for and increasingly controlled by algorithms. Written by eminent personalities from academia and industry, the papers included offer insights from a number of perspectives, providing an overview of the state of the art in the field. The book consists of invited talks by respected speakers, papers presented in technical sessions, and tutorials to offer ideas, results, work in progress, and experiences of various algorithmic aspects of computational science and engineering.
