Sulfur Compounds In Hydrocarbon Pyrolysis:

Converting Power into Chemicals and Fuels Martin Bajus, 2023-07-10 CONVERTING POWER INTO CHEMICALS AND FUELS Understand the pivotal role that the petrochemical industry will play in the energy transition by integrating renewable or low carbon alternatives Power into Chemicals and Fuels stresses the versatility of hydrogen as an enabler of the renewable energy system an energy vector that can be transported and stored and a fuel for the transportation sector heating of buildings and providing heat and feedstock to industry It can reduce both carbon and local emissions increase energy security and strengthen the economy as well as support the deployment of renewable power generation such as wind solar nuclear and hydro With a focus on power to X technologies this book discusses the production of basic petrochemicals in such a way as to minimize the carbon footprint and develop procedures that save energy or use energy from renewable sources Various different power to X system configurations are introduced with discussions on their performance environmental impact and cost Technologies for sustainable hydrogen production are covered focusing on water electrolysis using renewable energy as well as consideration of the remaining challenges for large scale production and integration with other technologies Power into Chemicals and Fuels readers will also find Discussion of recent advances in power into x technologies for the production of ethylene propylene formic acid and more Coverage of every stage in the power into x process from power generation to upgrading the final product Thermodynamic technoeconomic and life cycle assessment analyses of each major process Power into Chemicals and Fuels is a valuable resource for scientists and engineers working in the petrochemicals and hydrocarbons industries as well as for all industry professionals in these and related fields The Pyrolysis of Carbon Compounds Charles Dewitt Hurd, 1929 **Adventures In Organic Sulfur Chemistry** E.

Campaigne, 1990 **Physicochemistry of Petroleum Dispersions in Refining Technology** Maciej Paczuski, 2024-03-06 The book describes the results of research dealing with two types of petroleum dispersions water in petroleum fractions and fuels as well as asphaltenes in crude oil Such industrial research is aimed at acquiring new knowledge useful for improving processes and products The main goal of the research carried out was to solve problems of refining technology and the exploitation of petroleum products Some of the developed solutions have been patented and applied in industry The problem of solubilizing a small technological amount of water in gasoline and diesel fuels with the aid of surfactant compositions has been successfully resolved This solution has been used in business practice it also increases the water tolerance of gasoline with 5% ethanol and allows for the effective use of LPG The coalescence on fibrous barriers for dewatering fractions from the atmospheric distillation of crude oil allowed for the economic removal of dispersed water and additionally the removal from diesel distillates of a significant part of the mineral contaminations A coalescing method of removing sodium lye dispersed in heavy gasoline from the FCC process was successfully used in an industrial plant replacing the sand filter used in Mercox technology The deep dehydration of the hydrotreated kerosene fraction by evaporating water into an inert gas a nitrogen

blanket was developed The product was additionally protected against the aging processes The influence of pyrolysis oil a waste product of the pyrolysis process on the physical structure of crude oil was investigated The results of the laboratory tests were verified in industrial trials in the AVD plant Positive test results made it possible to use pyrolysis oil on an industrial scale changing the dispersion structure and properties of crude oil as well as distillation results
