**Petrology of the Metamorphic Rocks** R.

Mason, 2013-12-01 There has been a great advance in the understanding of processes of metamorphism and of metamorphic rocks since the last edition of this book appeared. Methods for determining temperatures and pressures have become almost routine and there is a wide appreciation that there is not a single temperature and pressure of metamorphism but that rocks may preserve in their minerals chemistry and textures traces of their history of burial, heating, deformation and permeation by fluids. However, this exciting new knowledge is still often difficult for non-specialists to understand and this book like the first edition aims at enlightenment. I have concentrated on the interpretation of the plate tectonic settings of metamorphism rather than following a geochemical approach. Although there is an impressive degree of agreement between the two I believe that attempting to discover the tectonic conditions accompanying rock recrystallization will more readily arouse the interest of the beginner. I have used a series of case histories as in the first edition drawing on my own direct experience as far as possible. This m

origin and formation of metamorphic rocks and their genetic systems incorporating the works of such distinguished European scientists as Rosenbusch, Becke, Niggli, Sander, Eskola, Barth and others with present day knowledge and the results of Soviet and American investigations. The Nature and Models of Metamorphism Vladimir V. Reverdatto, Igor I.

Likhanov, Oleg P. Polyansky, Valentin S. Sheplev, Vasilii Yu. Kolobov, 2018-12-31 This book presents the genetic connections of metamorphism and geodynamics. It discusses the tectonic and magmatic processes as the reason of metamorphism and the geological types of metamorphism which define the features of parameters and t paths. Three categories of metamorphism are distinguished depending on the heat flow rate: 1 at a geothermal gradient near to an average terrestrial normal value; 2 at a heightened thermal gradient as the result of additional heat supply in the earth's crust by magmatic intrusions and diapirism of magma; 3 at a reduced thermal gradient during the collision of lithosphere plates and blocks of the earth's crust. The quantitative methods of description of metamorphism have been widely used in this book. The mathematical models of metamorphism have been studied in connection with magmatic intrusions, rifting process and magmatic diapirism. Mineral changes in the rocks controlled by variations of parameters, mass transfer and chemical reactions have also been characterized. The book proposes a quasi-stationary model of diffusion metasomatism with respect to the formation of zonal structures of minerals. The method of mineral thermobarometry for the conditions of unsteady equilibrium has been worked out. The quantitative analysis of mass transfer during metamorphic reactions in the rock matrix has been carried out and the mobility of chemical elements at metamorphism has been estimated as well. The book is intended for specialists in the fields of petrology, mineralogy and geochemistry and for students at the senior and graduate level. *Bulletin de la Commission Géologique de Finlande*, 1928 **Mineralogical and Structural Evolution of the Metamorphic Rocks** Francis J.
