Efficiency, Justice and Care Yvonne Denier,2007-03-06 Since the 90 s issues of scarcity priority setting and rationing lie at the centre of most current debates on health care These are pressing issues one way or another limits have to be set As such the question of what is involved in just health care becomes much more complex This complexity can be represented as an inconsistent triad a set of three propositions of which any two are compatible but which together form a contradiction In the case of health care the three rival values are social efficiency justice and decent quality care It seems to be that we can have any two but not all three Essentially the central question is the following how best to square the proverbial welfare circle How can resources be matched to needs or needs to resources in socially acceptable and economically feasible ways This book attempts to answer the question how health care can be incorporated into a comprehensive theory of justice while realising an acceptable balance between efficiency justice and care

The Economics of Resource Allocation in Health Care Andrea Klonschinski,2016-03-31 The question of how to allocate scarce medical resources has become an important public policy issue in recent decades Cost utility analysis is the most commonly used method for determining the allocation of these resources but this book counters the argument that overcoming its inherent imbalances is simply a question of implementing methodological changes The Economics of Resource Allocation in Health Care represents the first comprehensive analysis of equity weighting in health care resource allocation that offers a fundamental critique of its basic framework It offers a critique of health economics putting the discourse on economic evaluation into its broader socio political context Such an approach broadens the debate on fairness in health economics and ties it in with deeper rooted problems in moral philosophy Ultimately this interdisciplinary study calls for the adoption of a fundamentally different paradigm to address the distribution of scarce medical resources This book will be of interest to policy makers health care professionals and post graduate students looking to broaden their understanding of the economics of the health care system

Health in Megacities and Urban Areas Alexander Krämer,Mobarak Hossain Khan,Frauke Kraas,2011-07-06 Diverse driving forces processes and actors are responsible for different trends in the development of megacities and large urban areas Under the dynamics of global change megacities are themselves changing On the one hand they are prone to increasing socio economic vulnerability due to pronounced poverty

socio spatial and political fragmentation sometimes with extreme forms of segregation disparities and conflicts On the other hand megacities offer positive potential for global transformation e g minimisation of space consumption highly effective use of resources efficient disaster prevention and health care options if good strategies were developed At present in many megacities and urban areas of the developing world and the emerging economies the quality of life is eroding Most of the megacities have grown to unprecedented size and the pace of urbanisation has far exceeded the growth of the necessary infrastructure and services As a result an increasing number of urban dwellers are left without access to basic amenities like clean drinking water fresh air and safe food Additionally social inequalities lead to subsequent and significant intra urban health inequalities and unbalanced disease burdens that can trigger conflict and violence between subpopulations The guiding idea of our book lies in a multi and interdisciplinary approach to the complex topic of megacities and urban health that can only be adequately understood when different disciplines share their knowledge and methodological tools to work together We hope that the book will allow readersto deepen their understanding of the complex dynamics of urban and megacity populations through the lens of public health geographical and other research perspectives
