Summated Rating Scale Construction An Introduction:

Summated Rating Scale Construction Paul E. Spector, 1992 The goal in surveying is to develop a rating on some attitude value or opinion a summated rating scale To help researchers construct more effective scales Spector shows how to determine the number of items necessary the number of response categories and how to validate a scale **Data**

Construction and Data Analysis for Survey Research Raymond Kent, 2020-05-19 Based on the needs of business marketing and social science students this book provides an accessible and easy to follow guide to survey data analysis The book avoids the more usual statistics driven perspective Rather it provides an intuitive feel for handling survey data by emphasising that data analysis is more about understanding the research objectives what kinds of data have been collected how quantitative data were generated by the process of measurement how to create a data matrix and how to transform raw data before thinking about appropriate statistical calculations The author begins by considering what data are the different kinds of data that surveys generate and the tripartite format of all quantitative data The processes of measurement and the errors that may arise are carefully explained Coverage of the creation and analysis of a data matrix using SPSS is then provided The author then reviews what kinds of statistical procedure are required for what kinds of data and for what purposes The book concludes by giving a review of strategies for coping with all the kinds of practical problems that arise in survey research Reader friendly throughout Data Analysis A Guide to Market and Social Research provides numerous worked examples end of chapter questions and points for further discussion to help reinforce concepts learnt A data diskette containing the worked examples in SPSS is also provided in the back of the book Also available is a companion website with extra features to accompany the text please take a look by clicking below <http://www.palgrave.com/business/kent/index.asp>

Handbook of Research Design and Social Measurement Delbert C. Miller, Neil J. Salkind, 2002-01-16 If a student researcher had only one handbook on their bookshelf Miller and Salkind's Handbook would certainly have to be it With the updated material the addition of the section on ethical issues which is so well done that I'm recommending it to the departmental representative to the university IRB and a new Part 4 on Qualitative Methods the new Handbook is an indispensable resource for researchers Dan Cover Department of Sociology Furman University I have observed that most instructors want to teach methodology their way to imbue the course with their own approach Miller Salkind allows one to do this easily The book is both conceptually strong e.g. very good coverage of epistemology research design and statistics and at the same time provides a wealth of practical knowledge scales indices professional organizations computer applications etc In addition it covers the waterfront of methodology Michael L. Vasu Director of Information Technology North Carolina State University A unique and excellent reference tool for all social science researchers and a good textbook for graduate students and senior year undergraduate classes These students are about to enter the real life of research and need a handy and comprehensive tool as a starting point that offers shortcuts for getting into real research projects For a small project the

book offers enough information to get the project started For big projects the book is ideal for information on where to look for things and examples Jianhong Liu Department of Sociology Rhode Island College The book considered a necessity by many social science researchers and their students has been revised and updated while retaining the features that made it so useful The emphasis in this new edition is on the tools graduate students and more advanced researchers need to conduct high quality research Features Benefits Provides step by step instruction for students research training by beginning with how to find a creative idea a middle range theory and initial hypothesis and proceeds through design proposal collection and analysis of data followed by writing reporting and publication Section on scales and indices are organized so that readers can quickly locate and find the type of scale or index in which they may be interested All sections are now followed by useful and well considered reference sections so that readers can read more about each topic Includes updated coverage on new scales internal and external validity and new analytic techniques with extensive references on each Presents extensive coverage of how to prepare manuscripts for publication including a list of all journals covered by Sociological Abstracts along with the editorial office address and URL for each entry Discusses the importance of policy research with presentation and discussion of specific models as an adjunct to both applied and basic research techniques Provides extensive coverage of funding opportunities including those offered by the National Institutes of Health the National Science Foundation and a directory of private funding sources including relevant contact information New to this edition New Part 4 by John Creswell and Ray Maietta provides a comprehensive introduction to qualitative methods including a review of existing computer applications for collecting and analyzing data New and more current reviews and commentaries have replaced dated or no longer relevant excerpts Thousands of new references on the assessment of important sociological variables as well as references to such topics as statistical analysis computer applications and specific topics Thoroughly updated information on the use of computers and online research techniques including beginning and intermediate material about the Internet and its use by the modern research scientist Coherent and thoughtful review of the most popular statistical analysis software packages New guidelines and discussion of ethical practices in social and behavioral science research including extensive coverage of institutional review board procedures and activities Expansion of social indicators to include international coverage Plus there is an extensive and well organized table of contents with four levels of headings and for the first time in the history of the book a comprehensive index **Thirteen Strategies to Measure College Teaching** Ronald A. Berk, 2023-07-03

Student evaluations of college teachers perhaps the most contentious issue on campus This book offers a more balanced approach Evaluation affects pay promotion and tenure so of intense interest to all faculty Major academic marketing and publicity Combines original research with Berk s signature wacky humor To many college professors the words student evaluations trigger mental images of the shower scene from Psycho with those bloodcurdling screams They re thinking Why not just whack me now rather than wait to see those ratings again This book takes off from the premise that student ratings

are a necessary but not sufficient source of evidence for measuring teaching effectiveness It is a fun filled but solidly evidence based romp through more than a dozen other methods that include measurement by self peers outside experts alumni administrators employers and even aliens As the major stakeholders in this process both faculty AND administrators plus clinicians who teach in schools of medicine nursing and the allied health fields need to be involved in writing adapting evaluating or buying items to create the various scales to measure teaching performance This is the first basic introduction in the faculty evaluation literature to take you step by step through the process to develop these tools interpret their scores and make decisions about teaching improvement annual contract renewal dismissal merit pay promotion and tenure It explains how to create appropriate high quality items and detect those that can introduce bias and unfairness into the results Ron Berk also stresses the need for triangulation the use of multiple complementary methods to provide the properly balanced comprehensive and fair assessment of teaching that is the benchmark of employment decision making This is a must read to empower faculty administrators and clinicians to use appropriate evidence to make decisions accurately reliably and fairly Don t trample each other in your stampede to snag a copy of this book Designing and Constructing Instruments for Social Research and Evaluation David Colton,Robert W. Covert,2015-06-22 Written in easy to understand language this important text provides a systematic and commonsense approach to developing instruments for data collection and analysis This book can be used by both those who are developing instruments for the first time and those who want to hone their skills including students agency personnel program managers and researchers This book provides a thorough presentation of instrument construction from conception to development and pre testing of items formatting the instrument administration and finally data management and presentation of the findings Throughout the book the authors emphasize how to create an instrument that will produce trustworthy and accurate data To that end they have included guidelines for reviewing and revising the questionnaire to enhance validity and reliability They also show how to work effectively with stakeholders such as instruments designers decision makers agency personnel clients and raters or respondents *Understanding Correlation Matrices* Alexandria Hadd,Joseph Lee Rodgers,2020-11-29 Correlation matrices along with their unstandardized counterparts covariance matrices underlie the majority the statistical methods that researchers use today A correlation matrix is more than a matrix filled with correlation coefficients The value of one correlation in the matrix puts constraints on the values of the others and the multivariate implications of this statement is a major theme of the volume Alexandria Hadd and Joseph Lee Rodgers cover many features of correlations matrices including statistical hypothesis tests their role in factor analysis and structural equation modeling and graphical approaches They illustrate the discussion with a wide range of lively examples including correlations between intelligence measured at different ages through adolescence correlations between country characteristics such as public health expenditures health life expectancy and adult mortality correlations between well being and state level vital statistics correlations between the racial composition of cities and professional sports teams

and correlations between childbearing intentions and childbearing outcomes over the reproductive life course This volume may be used effectively across a number of disciplines in both undergraduate and graduate statistics classrooms and also in the research laboratory

Doing Business Research Nick Lee, Ian Lings, 2008-03-26 It's not often that you'll find an article or book that explains what you need to know in such plain simple terms Treasure it Andrew Farrell Doctoral Researcher Loughborough University Entertaining and authoritative without being patronising Professor Chris Hackley Royal Holloway University of London This is a gem of a book from two of the outstanding management researchers of their generation Easy to read and entertaining yet rigorous and comprehensive in its approach this book will be adopted as an essential aid for students undertaking final year projects masters dissertations and as a primer for doctoral researchers Professor Graham Hooley Aston University This book will fill a vital gap for post graduate research Professor Rod Brodie University of Auckland Business School For anyone involved in developing a research project this textbook provides an integrated accessible and humorous account that explains why research methods are the way they are and how they do what they do Unrivalled in its nature Doing Business Research addresses the research project as a whole and provides essential detail of philosophical and theoretical matters that are crucial to conceptualising the nature of methodology a pragmatic guide to why things are important and how they are important a huge range of things to consider that the reader can use to develop their research project further a resource book providing extensive suggested reading to help the researcher do their research
