**Advances in Virtual Agents and Affective Computing for the Understanding and Remediation of Social Cognitive Disorders** Eric Brunet-Gouet,Ali Oker,Jean-Claude Martin,Ouriel Grynszpan,Philip L. Jackson,2016-03-02 Advances in modern sciences occur thanks to within fields discoveries as well as confrontation of concepts and methods from separated sometimes distant domains of knowledge For instance the fields of psychology and psychopathology benefited from accumulated contributions from cognitive neurosciences which in turn received insights from molecular chemistry cellular

biology physics neuroimaging statistics and computer sciences data processing etc From the results of these researches one can argue that among the numerous cognitive phenomena supposedly involved in the emergence the human intelligence and organized behavior some of them are specific to the social nature of our phylogenetic order Scientific reductionism allowed to divide the social cognitive system into several components i e emotion processing and regulation mental state inference theory of mind agency etc New paradigms were progressively designed to investigate these processes within highly controlled laboratory settings Moreover the related constructs were successful at better understanding psychopathological conditions such as autism and schizophrenia with partial relationships with illness outcomes Here we would like to outline the parallel development of concepts in social neurosciences and in other domains such as computer science affective computing virtual reality development and even hardware technologies While several researchers in neurosciences pointed out the necessity to consider naturalistic social cognition Zaki and Ochsner *Ann N Y Acad Sci* 1167 16 30 2009 the second person perspective Schilbach et al *Behav Brain Sci* 36 4 393 414 2013 and reciprocity de Bruin et al *Front Hum Neurosci* 6 151 2012 both computer and software developments allowed more and more realistic real time models of our environment and of virtual humans capable of some interaction with users As noted at the very beginning of this editorial a new convergence between scientific disciplines might occur from which it is tricky to predict the outcomes in terms of new concepts methods and uses Although this convergence is motivated by the intuition that it fits well ongoing societal changes increasing social demands on computer technologies augmenting funding it comes with several difficulties for which the current *Frontiers* in topic strives to bring some positive answers and to provide both theoretical arguments and experimental examples The first issue is about concepts and vocabulary as the contributions described in the following are authored by neuroscientists computer scientists psychopathologists etc A special attention was given during the reviewing process to stay as close as possible to the publication standards in psychological and health sciences and to avoid purely technical descriptions The second problem concerns methods more complex computerized interaction models results in unpredictable and poorly controlled experiments In other words the assets of naturalistic paradigms may be alleviated by the difficulty to match results between subjects populations conditions Of course this practical question is extremely important for investigating pathologies that are associated with profoundly divergent behavioral patterns Some of the contributions of this topic provide description of strategies that allowed to solve these difficulties at least partially The last issue is about heterogeneity of the objectives of the researches presented here While selection criteria focused on the use of innovative technologies to assess or improve social cognition the fields of application of this approach were quite unexpected In an attempt to organize the contributions three directions of research can be identified 1 how innovation in methods might improve understanding and assessment of social cognition disorders or pathology 2 within the framework of cognitive behavioral psychotherapies CBT how should we consider the use of virtual reality or augmented reality 3 which are the

benefits of these techniques for investigating severe mental disorders schizophrenia or autism and performing cognitive training The first challenging question is insightfully raised in the contribution of Timmermans and Schilbach 2014 giving orientations for investigating alterations of social interaction in psychiatric disorders by the use of dual interactive eye tracking with virtual anthropomorphic avatars Joyal Jacob and collaborators 2014 bring concurrent and construct validities of a newly developed set of virtual faces expressing six fundamental emotions The relevance of virtual reality was exemplified with two contributions focusing on anxiety related phenomena Jackson et al 2015 describe a new environment allowing to investigate empathy for dynamic FACS coded facial expressions including pain Based on a systematic investigation of the impact of social stimuli modalities visual auditory Ruch and collaborators are able to characterize the specificity of the interpretation of laughter in people with gelotophobia 2014 On the issue of social anxiety Aymerich Franch et al 2014 presented two studies in which public speaking anxiety has been correlated with avatars similarity of participants self representations The second issue focuses on how advances in virtual reality may benefit to cognitive and behavioral therapies in psychiatry These interventions share a common framework that articulates thoughts feelings or emotions and behaviors and proposes gradual modification of each of these levels thanks to thought and schema analysis stress reduction procedures etc They were observed to be somehow useful for the treatment of depression stress disorders phobias and are gaining some authority in personality disorders and addictions The main asset of new technologies is the possibility to control the characteristics of symptom eliciting stimuli situations and more precisely the degree to which immersion is enforced For example Baus and Bouchard 2014 provide a review on the extension of virtual reality exposure based therapy toward recently described augmented reality exposure based therapy in individuals with phobias Concerning substance dependence disorders Hone Blanchet et collaborators 2014 present another review on how virtual reality can be an asset for both therapy and craving assessment stressing out the possibilities to simulate social interactions associated with drug seeking behaviors and even peers pressure to consume The last issue this Frontiers topic deals with encompasses the questions raised by social cognitive training or remediation in severe and chronic mental disorders autistic disorders schizophrenia Here therapies are based on drill and practice or strategy shaping procedures and most of the time share an errorless learning of repeated cognitive challenges Computerized methods were early proposed for that they do effortlessly and with limited costs repetitive stimulations While repetition was incompatible with realism in the social cognitive domain recent advances provide both immersion and full control over stimuli Georgescu and al 2014 exhaustively reviews the use of virtual characters to assess and train non verbal communication in high functioning autism HFA Grynszpan and Nadel 2015 present an original eye tracking method to reveal the link between gaze patterns and pragmatic abilities again in HFA About schizophrenia Oker and collaborators 2015 discuss and report some insights on how an affective and reactive virtual agents might be useful to assess and remediate several defects of social cognitive disorders About assessment within virtual avatars on schizophrenia Park et

al 2014 focused on effect of perceived intimacy on social decision making with schizophrenia patients Regarding schizophrenia remediation Peyroux and Franck 2014 presented a new method named RC2S which is a cognitive remediation program to improve social cognition in schizophrenia and related disorders To conclude briefly while it is largely acknowledged that social interaction can be studied as a topic of its own all the contributions demonstrate the added value of expressive virtual agents and affective computing techniques for the experimentation It also appears that the use of virtual reality is at the very beginning of a new scientific endeavor in cognitive sciences and medicine Nikon D3300 For Dummies Julie Adair King,2014-05-08 Take your best shot with your new Nikon D3300 Congratulations on your new Nikon D3300 DSLR You probably want to get shooting right away but first you need to know some basics about the controls and functions Nikon D3300 For Dummies is your ultimate guide to your new camera packed with everything you need to know to start taking beautiful photographs right out of the gate Author Julie Adair King draws on a decade of experience in photography instruction specifically Nikon and Canon to walk you through the basics and get you started off on the right foot Your new Nikon D3300 offers full control over exposure settings but it also includes pre sets and auto mode options for beginners Nikon D3300 For Dummies guides you through the specifics of each setting and teaches you how to determine what controls work best in a given situation Written specifically for the Nikon D3300 the book discusses only the controls and capabilities available on your model and shows you where to find them and how to use them Topics include Shooting in auto mode playback options and basic troubleshooting Working with light focus and color and conquering video mode Picture organization including file transfer and sharing Tips on photo editing and select features This full color book includes a variety of photos that demonstrate the effects of different settings allowing you to develop an eye for matching controls to situations If you want to get the most out of your new DSLR Nikon D3300 For Dummies is the best most complete guide on the market A Safety Self-inspection Program for Foodservice Operators National Restaurant Association (U.S.).
