Handbook of Child Psychopathology Michel Hersen, 2013-11-11 Although the field of child psychopathology is of relatively recent origin it is a healthy burgeoning one Within the past 10 to 20 years numerous articles and books have been published and the field can now be described as emerging with an identity of its own No longer can child psychopathology be viewed simply as a downward extension of adult psychopathology Rather children must be viewed as children not as miniature adults Such a situation requires that issues of child psychology and developmental psychology be intimately considered when delineating the problems of children Such a focus has guided our efforts in soliciting contributors and topics for this volume All contributors are active researchers and clinicians in the area of child psychopathology and all are acutely aware of the special considerations of child and developmental psychology as they relate to child behavior problems Further all contributors are empirically minded consequently the various chapters are data based and represent the most up to date knowledge available However since research based knowledge is more abundant in some topic areas than in others the chapters vary in length and scope

Children's Peer Relations: Issues in Assessment and Intervention B. H. Schneider, K. H. Rubin, J. E. Ledingham, 2012-12-06 Willard W Hartup This volume amounts to an anniversary collection It was 50 years ago that Lois Jack 1934 published the findings from what most investigators consider to be the first intervention study in this area The experiment later replicated and extended by Marjorie Page 1936 and Gertrude Chittenden 1942 concerned ascendant behavior in preschool children which was defined to include a The pursuit of one's own purposes against interference and b directing the behavior of others Individual differences in ascendance were assumed to have some stability across time and hence to be important in personality development But ascendance variations were also viewed as a function of the immediate situation Among the conditions assumed to determine ascendance were the individual's status in the group as expressed in others' attitudes toward him his conception of these attitudes and his previously formed social habits Jack 1934 p 10 Dr Jack's main interest was to show that nonascendant children identified on the basis of observations in the laboratory with another child were different from their more ascendant companions in one important respect They lacked self confidence And having demonstrated that Dr Jack devised a procedure for teaching the knowledge and skill to nonascendant children that the play materials required She guessed correctly that this training would bring about an increase in the ascendance scores of these children
