*Social Construction of Trust to Protect Ideas and Data in Space Science and Geophysics* Lynne G. Zucker, Michael R. Darby, 1995 This paper applies a rational action economic sociology approach to the central organizational theory question of whether action is embedded in pre formed institutions that are relatively cheap in terms of time and energy or to what extent action becomes embedded in newly constructed institutions that are more costly but perhaps better adapted to task goals We develop a new model of the social construction of trust producing social structure based on the initial endowment of this structure the demand for it and the cost of social construction We test the model with data on construction of social structure in collaborations in space science and geophysics developed in a large number of interviews conducted by the Center for History of Physics of the American Institute of Physics We do find that greater pre existing endowment reduces social construction of new institutions while greater demand for trust increases that construction We also find some evidence that social construction of trust producing social structure in fact results in production of higher value science

Great Minds in Management Ken G. Smith, Michael A. Hitt, 2005-09-22 In *Great Minds in Management* Ken G. Smith and Michael A. Hitt have brought together some of the most influential and original thinkers in management Their contributions to this volume not only outline their landmark contributions to management theory but also reflect on the process of theory development presenting their own personal accounts of the gestation of these theories The result is not only an ambitious and original panorama of the key ideas in management theory presented by their originators but also a unique collection of reflections on the process of theory development an area which to date little has been written about by those who have actually had experience of building theory

In their concluding chapter Ken G Smith and Michael A Hitt draw together some common themes about the development of management theory over the last half a century and suggest some of the conclusions to be drawn about how theory comes into being

**Trust and the Public Good** William G. Tierney, 2006 Textbook

**Trust, Organizations and Social Interaction** Søren Jagd, Lars Fuglsang, 2016-05-27

Trust Organizations and Social Interaction aims to promote new knowledge about trust in an organizational context. The book provides case analysis of how trust is formed through processes of social interaction in which actors observe, reflect upon, and make sense of trust behaviour and its meaning in an organizational and social environment. It greatly contributes to clarifying what a process view may mean in trust research and to the understanding how social interaction processes affect trust. The contributing authors demonstrate how trust and distrust are produced and reproduced in a complex interplay with social processes and practices. Instead of asking how trust may be measured or how trust is a resource for managers, they explore how trust develops and how managers become intertwined with and caught up in trust processes. This enlightening empirical analysis of trust and its relationship with organizational processes is a vital resource for students, academics, and scholars of organization management, organizational behaviour, and change, HRM, and learning.

**Organizational Trust** Mark N. K. Saunders, Denise Skinner, Graham Dietz, Nicole Gillespie, Roy J. Lewicki, 2010-06-10

The globalized nature of modern organizations presents new and intimidating challenges for effective relationship building. Organizations and their employees are increasingly being asked to manage unfamiliar relationships with unfamiliar parties. These relationships not only involve working across different national cultures but also dealing with different organizational cultures, different professional cultures, and even different internal constituencies. Managing such differences demands trust. This book brings together research findings on organizational trust building across cultures. Established trust scholars from around the world consider the development and maintenance of trust between, for example, management consultants and their clients, senior international managers from different nationalities, different internal organizational groupings during times of change, international joint ventures, and service suppliers and the local communities they serve. These studies, set in a wide variety of national settings, are an important resource for academics, students, and practitioners who wish to know more about the nature of cross-cultural trust building in organizations.
