The Computer And The Mind An Introduction To Cognitive Science:

The Computer and the Mind Philip Nicholas Johnson-Laird, 1988 In a field choked with seemingly impenetrable jargon Philip N Johnson Laird has done the impossible written a book about how the mind works that requires no advance knowledge of artificial intelligence neurophysiology or psychology The mind he says depends on the brain in the same way as the execution of a program of symbolic instructions depends on a computer and can thus be understood by anyone willing to start with basic principles of computation and follow his step by step explanations The author begins with a brief account of the history of psychology and the birth of cognitive science after World War II He then describes clearly and simply the nature of symbols and the theory of computation and follows with sections devoted to current computational models of how the mind carries out all its major tasks including visual perception learning memory the planning and control of actions deductive and inductive reasoning and the formation of new concepts and new ideas Other sections discuss human communication meaning the progress that has been made in enabling computers to understand natural language and finally the difficult problems of the conscious and unconscious mind free will needs and emotions and self awareness In an envoi the author responds to the critics of cognitive science and defends the computational view of the mind as an alternative to traditional dualism cognitive science integrates mind and matter within the same explanatory framework This first single authored introduction to cognitive science will command the attention of students of cognitive science at all levels including psychologists linguists computer scientists philosophers and neuroscientists as well as all readers curious about recent knowledge on how the mind works

Consciousness emerges as the key topic in this second edition of Owen Flanagan s popular introduction to cognitive science and the philosophy of psychology in a new chapter Flanagan develops a neurophilosophical theory of subjective mental life He brings recent developments in the theory of neuronal group selection and connectionism to bear on the problems of the evolution of consciousness qualia the unique first personal aspects of consciousness the causal role of consciousness and the function and development of the sense of personal identity He has also substantially revised the chapter on cognitive psychology and artificial intelligence to incorporate recent discussions of connectionism and parallel distributed processing **The**

Boden,2004-02-24 How is it possible to think new thoughts What is creativity and can science explain it And just how did Coleridge dream up the creatures of The Ancient Mariner When The Creative Mind Myths and Mechanisms was first published Margaret A Boden s bold and provocative exploration of creativity broke new ground Boden uses examples such as jazz improvisation chess story writing physics and the music of Mozart together with computing models from the field of artificial intelligence to uncover the nature of human creativity in the arts The second edition of The Creative Mind has been updated to include recent developments in artificial intelligence with a new preface

they have ignored a vast body of data that bear directly on the way different cultures imagine and experience emotion literature This is the first empirically and cognitively based discussion of narrative universals Professor Hogan argues that to a remarkable degree the stories people admire in different cultures follow a limited number of patterns and that these patterns are determined by cross culturally constant ideas about emotion In formulating his argument Professor Hogan draws on his extensive reading in world literature experimental research treating emotion and emotion concepts and methodological principles from the contemporary linguistics and the philosophy of science He concludes with a discussion of the relations among narrative emotion concepts and the biological and social components of emotion **Circuits of the**
