Marsilius of Inghen: Divine Knowledge in Late Medieval Thought Maarten Hoenen, 2021-11-22 The problem of divine knowledge focusing on questions of freedom and necessity finds itself at the intersection of age old discussions of logic metaphysics and ethics The subject was discussed with particular clarity in the period 1250 1400 Many different solutions were put forward and criticized with an acuity and depth that was never reached again One contributor to the discussion Marsilius of Inghen d 1396 is of special importance He assimilated not only the nominalism and theological developments of the 14th century but also the ideas of Thomas Aquinas and Bonaventure resulting in the so called via marsiliana This study determines with great precision Marsilius s position in the debates in the period 1250 1400 often throwing new light on aspects of his philosophy and theology The wide scope of his work makes it suitable as a general introduction to medieval thought Specialists will find it useful for its detailed and in depth analysis of both maiores and minores By its clear style and structure this study will prove useful in contemporary systematic discussions of the subject as well Divine Impassibility Richard E. Creel, 2005-06-21 In this volume Richard Creel sets forth a thesis that offers a third way to approach divine impassibility Defining impassibility as imperviousness to causal influence from external factors Creel sketches a path between Aquinas and Hartshorne by asserting that once this definition is accepted one must still distinguish the various respects in which God is or is not impassible Virtually no one would dispute that the divine nature is impassible God will never cease to be God no matter what happens in creation With respect to the divine knowledge and will however there are

conflicting views Creel claims that God's will is impassible because God knows everything that can be accomplished by divine power Yet unlike Aquinas Creel believes that God has this knowledge in virtue of a plenum of possibilities eternally coexistent with the divine being The absolute is not simply God but rather God plus the plenum Creel suggests that God's knowledge is passible with respect to the contingent future actions of creatures God knows these actions therefore not in their presentiality from all eternity as Aquinas would hold but only as they happen and become actual God's will however remains immediately impassible because the divine will is ordered to possibilities not actualities God never has to wait until after we do something in order to decide his response to it He has eternally decided his response to all that we might do Ultimately God's feelings remain impassible no matter what concrete decisions human beings make because the basic intent of the divine plan for us is always achieved we exercise our freedom to choose for or against God God is impassible with respect to the divine nature divine will and divine feelings but God is passible with respect to the divine knowledge of future contingent events

The public's fascination with archaeology has meant that archaeologists have had to deal with media more regularly than other scholarly disciplines. How archaeologists communicate their research to the public through the media and how the media view archaeologists has become an important feature in the contemporary world of academic and professional archaeologists. In this volume a group of archaeologists, many with media backgrounds, address the wide range of questions in this intersection of fields. An array of media forms are covered, including television, film, photography, the popular press, art, video games, radio, and digital media, with a focus on the overriding question: What are the long-term implications of the increasing exposure through and reliance upon media forms for archaeology in the contemporary world? The volume will be of interest to archaeologists and those teaching public archaeology courses.

*Knowledge and Scientific and Religious Belief*  
Paul Weingartner, 2018-09-10. The present book is a book on epistemology with the special and new focus on the relation of different types of knowledge and a differentiated comparison to both scientific and religious belief. The present book distinguishes seven types of knowledge and compares them with both scientific and religious belief. The usual view is that scientific and religious belief have nothing or not much in common. Although there are important differences in contradistinction to this widespread view, it is shown that there are also many similarities between them. There are similarities concerning the reasons for belief with respect to the action of believing concerning a similar voluntary component or even concerning properties of the content of belief. A detailed discussion of many types of knowledge and a differentiated comparison to scientific and religious belief is an important new contribution to the scientific literature in epistemology.

**A Logical Journey**  
Hao Wang, 1997-02-03. Hao Wang (1921–1995) was one of the few confidants of the great mathematician and logician Kurt Gödel. *A Logical Journey* is a continuation of Wang's *Reflections on Gödel* and also elaborates on discussions contained in *From Mathematics to Philosophy*. A decade in preparation, it contains important and unfamiliar insights into Gödel's views on a wide range of issues: from Platonism and the nature of logic to minds and machines, the existence of God, and positivism and phenomenology. The impact of Gödel's theorem on twentieth-century thought is on par with that of Einstein's theory of relativity, Heisenberg's uncertainty principle, or Keynesian economics. These previously unpublished intimate and informal conversations, however, bring to light and amplify Gödel's other major contributions to logic and philosophy. They reveal that there is much more in Gödel's philosophy of mathematics than is commonly believed and more in his philosophy than his philosophy of mathematics. Wang writes that it is even possible that his quite informal and loosely structured conversations with me, which I am freely using in this book, will turn out to be the fullest existing expression of the diverse components of his inadequately articulated general philosophy. The first two chapters are devoted to Gödel's life and mental development. In the chapters that follow, Wang illustrates the quest for overarching solutions and grand unifications of knowledge and action in Gödel's written speculations on God and an afterlife. He gives the background and a chronological summary of the conversations, considers Gödel's comments on philosophies and philosophers, his support

of Husserl's phenomenology and his digressions on Kant and Wittgenstein and his attempt to demonstrate the superiority of the mind's power over brains and machines Three chapters are tied together by what Wang perceives to be G del's governing ideal of philosophy an exact theory in which mathematics and Newtonian physics serve as a model for philosophy or metaphysics Finally in an epilog Wang sketches his own approach to philosophy in contrast to his interpretation of G del's outlook

**The Buddhist Theory of Self-Cognition** Zhihua Yao, 2012-09-10 This highly original work explores the concept of self awareness or self consciousness in Buddhist thought Its central thesis is that the Buddhist theory of self cognition originated in a soteriological discussion of omniscience among the Mahasamghikas and then evolved into a topic of epistemological inquiry among the Yogacarins To illustrate this central theme this book explores a large body of primary sources in Chinese Pali Sanskrit and Tibetan most of which are presented to an English readership for the first time It makes available important resources for the study of the Buddhist philosophy of mind

**The Growth of Mathematical Knowledge** Emily Grosholz, Herbert Breger, 2013-04-17 Mathematics has stood as a bridge between the Humanities and the Sciences since the days of classical antiquity For Plato mathematics was evidence of Being in the midst of Becoming garden variety evidence apparent even to small children and the unphilosophical and therefore of the highest educational significance In the great central similes of The Republic it is the touchstone of intelligibility for discourse and in the Timaeus it provides in an oddly literal sense the framework of nature insuring the intelligibility of the material world For Descartes mathematical ideas had a clarity and distinctness akin to the idea of God as the fifth of the Meditations makes especially clear Cartesian mathematics are constructions as well as objects envisioned by the soul in the Principles the work of the physicist who provides a quantified account of the machines of nature hovers between description and constitution For Kant mathematics reveals the possibility of universal and necessary knowledge that is neither the logical unpacking of concepts nor the record of perceptual experience In the Critique of Pure Reason mathematics is one of the transcendental instruments the human mind uses to apprehend nature and by apprehending to construct it under the universal and necessary laws of Newtonian mechanics
