

All eyes, despite their mind-boggling variety across lifeforms, come from a history of shared genes. Studying these genes has uncovered a roadmap to understanding how eye complexity has changed throughout history.

team sports as a set of highly heterogeneous physical mental and cognitive activities within which it is difficult if not impossible to find common behavioural playing regularities or universal pedagogies for controlling those activities Adopting a whole system approach and exploring the concepts of control regulation and self organization this book argues that it is possible for coaches managers and psychologists to develop a better understanding of how a complex system works and therefore to more successfully manage and influence a team s performance This book draws on literature from the biological behavioural and social sciences including psychology sociology and sports performance analysis to develop a detailed interdisciplinary and multi level picture of the elite sports team It analyzes behaviour across five inter connected levels the team as a managed institution coaching staff controlling players via cybernetic flows the team as a playing unit the individual player as a complex dynamic system expressed through behaviour and a player s complex physiological biological system Drawing these together the book throws fascinating new light on the elite sports team and will be useful reading for all students researchers or professionals with an interest in sport psychology sport management sport coaching sport performance analysis or complex systems theory

Algorithm & SoC Design for Automotive Vision Systems Jaeseok Kim, Hyunchul Shin, 2014-06-29 An emerging trend in the automobile industry is its convergence with information technology IT Indeed it has been estimated that almost 90% of new automobile technologies involve IT in some form Smart driving technologies that improve safety as well as green fuel technologies are quite representative of the convergence between IT and automobiles The smart driving technologies include three key elements

sensing of driving environments detection of objects and potential hazards and the generation of driving control signals including warning signals Although radar based systems are primarily used for sensing the driving environments the camera has gained importance in advanced driver assistance systems ADAS This book covers system on a chip SoC designs including both algorithms and hardware related with image sensing and object detection by using the camera for smart driving systems It introduces a variety of algorithms such as lens correction super resolution image enhancement and object detections from the images captured by low cost vehicle camera This is followed by implementation issues such as SoC architecture hardware accelerator software development environment and reliability techniques for automobile vision systems This book is aimed for the new and practicing engineers in automotive and chip design industries to provide some overall guidelines for the development of automotive vision systems It will also help graduate students understand and get started for the research work in this field *European Economics at a Crossroads* John Barkley Rosser, Richard P. F.

Holt, David C. Colander, 2010-01-01 As Europe moves toward an integrated academic system European economics is changing This book discusses that change along with the changes that are happening simultaneously within the economics profession The authors argue that modern economics can no longer usefully be described as neoclassical but is much better described as complexity economics The complexity approach embraces rather than assumes away the complexities of social interaction The authors also argue that despite all the problems with previous European academic structures those structures allowed for more diversity than exists in US universities and thus were often ahead of US universities in exploring new cutting edge approaches The authors further argue that by trying to judge themselves by US centric measures and to copy US universities the European economics profession is undermining some of the strengths of the older system strengths on which it should be building While the authors agree that European economics needs to go through major changes in the coming decade they argue that by building on Europe's strengths rather than trying to follow a US example Europe will be more likely to become the global leader in economics in the coming decades rather than a second rate copy of the US The book begins with two chapters spelling out the authors view of the changes in economics and European economics This is followed by 11 interviews with a diverse set of innovative European economists from a range of European countries In the interviews these European economists reflect on the ongoing changes in economics generally and in European economics specifically These interviews demonstrate how the economics profession is moving away from traditional neoclassical economics into a dynamic set of new methods and approaches incorporating work in behavioral economics experimental economics evolutionary game theory and ecological approaches complexity and nonlinear dynamics methodological analysis and agent based modelling that the authors classify as complexity economics This fascinating and easy to read book will prove a stimulating and thought provoking read for those with an interest in economics European education and the nature of academic disciplines generally

Defining Israel Simon Rabinovitch, 2018-11-12 *Defining Israel* The Jewish State Democracy and the Law is the first book

in any language devoted to the controversial passage of Israel's nation state law Israel has no constitution and though it calls itself the Jewish state there is no agreement among Israelis on how that fact should be reflected in the government's laws or by its courts Since the 1990s a number of civil society groups and legislators have drafted constitutions and proposed Basic Laws with constitutional standing that would clarify what it means for Israel to be a Jewish and democratic state Are these bills liberal or chauvinist Are they a defense of the Knesset or an attack on the independence of the courts Is their intention democratic or anti democratic The fight over the nation state law whether to have one and what should be in it toppled the 19th Knesset's governing coalition and even after its passage on July 29 2018 remains a point of contention among Israel's lawmakers and increasingly the Israeli public Defining Israel brings together influential scholars journalists and politicians observers and participants opponents and proponents Jews and Arabs all debating the merits and meaning of Israel's nation state law Together with translations of each draft law the final law and other key documents the essays and sources in Defining Israel are essential to understand the ongoing debate over what it means for Israel to be a Jewish and democratic state

Ezekiel Ralph W. Klein, 2024-03-12 Ezekiel was an ordinary person called mortal by God more often than his own name Yet because of the radical times Ezekiel reacted in a radical way through his unusual lifestyle and his sharp theological diagnosis His important message about judgment and hope came at a critical moment of Israel's history This volume is not a biography about the prophet Ezekiel It is a literary and theological analysis of a biblical document left behind by a nearly anonymous and mostly unknown prophet Ralph W Klein analyzes the shape of the book deciphers its imagery comments on its technical vocabulary and relates its parts to one another Ezekiel's passionate diagnosis of the incompatibility between the failings of ancient Israel and the potential for its ongoing history also calls into question modern assumptions about the inevitable viability of synagogue church and society His nearly unbounded optimism about the radical transformations that can be expected when God dwells with people has important implications for all heirs of the prophet in the community of the faithful who know that the name of their city is or ought to be Yahweh is there

Macroeconomics, 2006 *Chaos, Nonlinearity, Complexity* Ashok Sengupta, 2006-09-25 This book explores non extensive statistical mechanics in non equilibrium thermodynamics and presents an overview of the strong nonlinearity of chaos and complexity in natural systems drawing on relevant mathematics from topology measure theory inverse and ill posed problems set valued analysis and nonlinear functional analysis It offers a self contained theory of complexity and complex systems as the steady state of non equilibrium systems denoting a homeostatic dynamic equilibrium between stabilizing order and destabilizing disorder

How Economics Should Be Done David C. Colander, Huei-chun Su, 2018-01-26 David Colander has been writing about economic methodology for over 30 years but he goes out of his way to emphasize that he does not see himself as a methodologist His pragmatic methodology is applicable to what economists are doing and attempts to answer questions that all economists face as they go about their work The articles collected in this volume are divided with the first part providing a

framework underlying Colander's methodology and introducing Colander's methodology for economic policy within that framework Part two presents Colander's view on the methodology for microeconomics while part three looks at Colander's methodology for macroeconomics The book closes with discussions of broader issues

Computable Foundations for Economics K. Vela Velupillai, 2012-07-26

Computable Foundations for Economics is a unified collection of essays some of which are published here for the first time and all of which have been updated for this book on an approach to economic theory from the point of view of algorithmic mathematics By algorithmic mathematics the author means computability theory and constructive mathematics This is in contrast to orthodox mathematical economics and game theory which are formalised with the mathematics of real analysis underpinned by what is called the ZFC formalism i.e. set theory with the axiom of choice This reliance on ordinary real analysis and the ZFC system makes economic theory in its current mathematical mode completely non algorithmic which means it is numerically meaningless The book provides a systematic attempt to dissect and expose the non algorithmic content of orthodox mathematical economics and game theory and suggests a reformalization on the basis of a strictly rigorous algorithmic mathematics This removes the current schizophrenia in mathematical economics and game theory where theory is entirely divorced from algorithmic applicability for experimental and computational exercises The chapters demonstrate the uncomputability and non constructivity of core areas of general equilibrium theory game theory and recursive macroeconomics The book also provides a fresh look at the kind of behavioural economics that lies behind Herbert Simon's work and resurrects a role for the noble classical traditions of induction and verification viewed and formalised now algorithmically It will therefore be of particular interest to postgraduate students and researchers in algorithmic economics game theory and classical behavioural economics
