volume of Advances in Intelligent Systems and Computing contains accepted papers presented at WSC17 the 17th Online World Conference on Soft Computing in Industrial Applications held from December 2012 to January 2013 on the Internet WSC17 continues a successful series of scientific events started over a decade ago by the World Federation of Soft Computing It brought together researchers from over the world interested in the ever advancing state of the art in the field Continuous technological improvements make this online forum a viable gathering format for a world class conference The aim of WSC17 was to disseminate excellent research results and contribute to building a global network of scientists interested in both theoretical foundations and practical applications of soft computing The 2012 edition of the Online World Conference on Soft Computing in Industrial Applications consisted of general track and special session on Continuous Features Discretization for Anomaly Intrusion Detectors Generation and special session on Emerging Theories and Applications in Transportation Science A total of 33 high quality research papers were accepted after a rigorous review process and are provided in this book

Soft Computing in Industrial Applications António Gaspar-Cunha, Ricardo Takahashi, Gerald Schaefer, Lino Costa, 2011-04-27 The 15th Online World Conference on Soft Computing in Industrial Applications held on the Internet constitutes a distinctive opportunity to present and discuss high quality papers making use of sophisticated Internet tools and without incurring in high cost and thus facilitating the participation of people from the entire world The book contains a collection of papers covering outstanding research and developments in the field of Soft Computing including evolutionary computation fuzzy control and neuro fuzzy systems bio inspired systems optimization techniques and application of Soft Computing techniques in modeling control optimization data mining pattern recognition and traffic and transportation systems

New Concepts and Applications in Soft Computing Valentina Emilia Balas, János Fodor, Annamária R. Várkonyi-Kóczy, 2012-07-20 The book provides a sample of research on the innovative theory and applications of soft computing paradigms The idea of Soft Computing was initiated in 1981 when Professor Zadeh published his first paper on soft data analysis and constantly evolved ever since Professor Zadeh defined Soft Computing as the fusion of the fields of fuzzy logic FL neural network theory NN and probabilistic reasoning PR with the latter subsuming belief networks evolutionary computing including DNA computing chaos theory and parts of learning theory into one multidisciplinary system As Zadeh said the essence of soft computing is that unlike the traditional hard computing soft computing is aimed at an accommodation with the pervasive imprecision of the real world Thus the guiding principle of soft computing is to exploit the tolerance for imprecision uncertainty and partial truth to achieve tractability robustness low solution cost and better rapport with reality In the final analysis the role model for soft computing is the human mind We hope that the reader will share our excitement and find our volume both useful and inspiring
