Foundations, Algorithms, Tools, and Applications** Rachid Guerraoui,Paolo Romano,2014-12-29 The advent of multi core architectures and cloud computing has brought parallel programming into the mainstream of software development Unfortunately writing scalable parallel programs using traditional lock based synchronization primitives is well known to be a hard time consuming and error prone task mastered by only a minority of specialized programmers Building on the familiar abstraction of atomic transactions Transactional Memory TM promises to free programmers from the complexity of conventional synchronization schemes simplifying the development and verification of concurrent programs enhancing code reliability and boosting productivity Over the last decade TM has been subject to intense research on a broad range of aspects including hardware and operating systems support language integration as well as algorithms and theoretical foundations On the industrial side

the major players of the software and hardware markets have been up front in the research and development of prototypal products providing support for TM systems This has recently led to the introduction of hardware TM implementations on mainstream commercial microprocessors and to the integration of TM support for the world s leading open source compiler In such a vast inter disciplinary domain the Euro TM COST Action IC1001 has served as a catalyzer and a bridge for the various research communities looking at disparate yet subtly interconnected aspects of TM This book emerged from the idea having Euro TM experts compile recent results in the TM area in a single and consistent volume Contributions have been carefully selected and revised to provide a broad coverage of several fundamental issues associated with the design and implementation of TM systems including their theoretical underpinnings and algorithmic foundations programming language integration and verification tools hardware supports distributed TM systems self tuning mechanisms as well as lessons learnt from building complex TM based applications   Network World ,2000-12-11 For more than 20 years Network World has been the premier provider of information intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations Readers are responsible for designing implementing and managing the voice data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce   **Computational Intelligence in Sensor Networks** Bijan Bihari Mishra,Satchidanand Dehuri,Bijaya Ketan Panigrahi,Ajit Kumar Nayak,Bhabani Shankar Prasad Mishra,Himansu Das,2018-05-22 This book discusses applications of computational intelligence in sensor networks Consisting of twenty chapters it addresses topics ranging from small scale data processing to big data processing realized through sensor nodes with the help of computational approaches Advances in sensor technology and computer networks have enabled sensor networks to evolve from small systems of large sensors to large nets of miniature sensors from wired communications to wireless communications and from static to dynamic network topology In spite of these technological advances sensor networks still face the challenges of communicating and processing large amounts of imprecise and partial data in resource constrained environments Further optimal deployment of sensors in an environment is also seen as an intractable problem On the other hand computational intelligence techniques like neural networks evolutionary computation swarm intelligence and fuzzy systems are gaining popularity in solving intractable problems in various disciplines including sensor networks The contributions combine the best attributes of these two distinct fields offering readers a comprehensive overview of the emerging research areas and presenting first hand experience of a variety of computational intelligence approaches in sensor networks   *Euro-Par 2007 Parallel Processing* Anne-Marie Kermarrec,Luc Bougé,Thierry Priol,2007-08-28 This volume constitutes the refereed proceedings of the 13th International Conference on Parallel Computing The papers are organized into topical sections covering support tools and environments performance prediction and evaluation scheduling and load balancing compilers for high performance parallel and distributed databases grid and cluster computing peer to peer

Lopez,Joaquim Barros,2011-02-10 As other complex systems in social and natural sciences as well as in engineering the Internet is hard to understand from a technical point of view Packet switched networks defy analytical modeling The Internet is an outstanding and challenging case because of its fast development unparalleled heterogeneity and the inherent lack of measurement and monitoring mechanisms in its core conception This monograph deals with applications of computational intelligence methods with an emphasis on fuzzy techniques to a number of current issues in measurement analysis and control of traffic in the Internet First the core building blocks of Internet Science and other related networking aspects are introduced Then data mining and control problems are addressed In the first class two issues are considered predictive modeling of traffic load as well as summarization of traffic flow measurements The second class control includes active queue management schemes for Internet routers as well as window based end to end rate and congestion control The practical hardware implementation of some of the fuzzy inference systems proposed here is also addressed While some theoretical developments are described we favor extensive evaluation of models using real world data by simulation and experiments **Towards a Common Software/Hardware Methodology for Future Advanced Driver Assistance Systems** Guillermo Payá-Vayá,Holger Blume,2022-09-01 The European research project DESERVE DEvelopment platform for Safe and Efficient dRiVE 2012 2015 had the aim of designing and developing a platform tool to cope with the continuously increasing complexity and the simultaneous need to reduce cost for future embedded Advanced Driver Assistance Systems ADAS For this purpose the DESERVE platform profits from cross domain software reuse standardization of automotive software component interfaces and easy but safety compliant integration of heterogeneous modules This enables the development of a new generation of ADAS applications which challengingly combine different functions sensors actuators
