Subcommittee on VA, HUD, and Independent Agencies,1996 *History of Nordic Computing 2* John Impagliazzo,Timo

Järvi,Petri Paju,2009-09-21 The First Conference on the History of Nordic Computing HiNC1 was organized in Trondheim in June 2003 The HiNC1 event focused on the early years of computing that is the years from the 1940s through the 1960s although it formally extended to year 1985 In the preface of the proceedings of HiNC1 Janis Bubenko Jr John Impagliazzo and Arne S lverberg describe well the peculiarities of early Nordic c puting 1 While developing hardware was a necessity for the first professionals quite soon the computer became an industrial product Computer scientists among others grew increasingly interested in programming and application software P gress in these areas from the 1960s to the 1980s was experienced as astonishing The developments during these decades were taken as the focus of HiNC2 During those decades computers arrived to every branch of large and medium sized businesses and the users of the computer systems were no longer only computer s cialists but also people with other main duties Compared to the early years of comp ing before 1960 where the number of computer projects and applications was small capturing a holistic view of the history between the 1960s and the 1980s is conside bly more difficult The HiNC2 conference attempted to help in this endeavor Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations for 1999: Testimony of members of Congress and other interested individuals and organizations United States. Congress. House. Committee on Appropriations. Subcommittee on VA, HUD, and Independent Agencies,1998 *Software Maintenance - A Management Perspective* Phaneendra Nath Vellanky,2007-10-23 Computer systems play an important role in our society Software drives those systems Massive investments of time and resources are made in developing and implementing these systems Maintenance is inevitable It is hard and costly Considerable resources are required to keep the systems active and dependable We cannot maintain software unless maintainability characters are built into the products and processes There is an urgent need to reinforce software development practices based on quality and reliability principles Though maintenance is a mini development lifecycle it has its own problems Maintenance issues need corresponding tools and techniques to address them Software professionals are key players in maintenance While development is an art and science maintenance is a craft We need to develop maintenance personnel to master this craft Technology impact is very high in systems world today We can no longer conduct business in the way we did before That calls for reengineering systems and software Even reengineered software needs maintenance soon after its implementation We have to take business knowledge procedures and data into the newly reengineered world Software maintenance people can play an important role in this migration process Software technology is moving into global and distributed networking environments Client server systems and object

orientation are on their way Massively parallel processing systems and networking resources are changing database services into corporate data warehouses Software engineering environments rapid application development tools are changing the way we used to develop and maintain software Software maintenance is moving from code maintenance to design maintenance even onto specification maintenance Modifications today are made at specification level regenerating the software components testing and integrating them with the system Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems Software professionals have to maintain not only the software but the momentum of change in systems and software In this study we observe various issues tools and techniques and the emerging trends in software technology with particular reference to maintenance We are not searching for specific solutions We are identifying issues and finding ways to manage them live with them and control their negative impact

The Design and Implementation of the RT-Thread Operating System Qiu Yi, Xiong Puxiang, Tianlong Zhu, 2020-11-12. Since the release of V0.01 in 2006 to the present V4.0 version, RT-Thread has developed a reputation among developers for its open source strategy. RT-Thread has gained a large following among members of the embedded open source community in China with hundreds of thousands of enthusiasts. RT-Thread is widely used in energy, automotive, medical, consumer electronics, among other applications, making it a mature and stable open source embedded operating system. The purpose of *RT-Thread RTOS Design and Implementation* is to create an easy learning curve for mastering RT-Thread so that more developers can participate in the development of RT-Thread and work together to create an open source, tiny and beautiful Internet of Things operating system. The book's first part introduces the RT-Thread kernel and starts with an overview of RT-Thread before covering thread management, clock management, inter-thread synchronization, inter-thread communication, memory management and interrupt management. The second part begins with RT-Thread kernel porting and explains how to port RT-Thread to a hardware board to run it. The second part also introduces RT-Thread components and discusses the Env development environment, FinSH console, device management and network framework. Additional topics covered include The I/O device framework, Virtual file systems, Peripheral interfaces, Devices including the PIN device, UART device and ADC device among others. Each chapter features code samples as well as helpful tables and graphs so you can practice as you learn as well as perform your own experiments.
