Definition and Management Jürgen Münch, Ove Armbrust, Martin Kowalczyk, Martín Soto, 2012-05-27 The concept of processes is at the heart of software and systems engineering. Software process models integrate software engineering methods and techniques and are the basis for managing large scale software and IT projects. High product quality routinely results from high process quality. Software process management deals with getting and maintaining control over processes and their evolution. Becoming acquainted with existing software process models is not enough though. It is important to understand how to select, define, manage, deploy, evaluate and systematically evolve software process models so that they suitably address the problems, applications and environments to which they are applied. Providing basic knowledge for these important tasks is the main goal of this textbook. Münch and his co-authors aim at providing knowledge that enables readers to develop useful process models that are suitable for their own purposes. They start with the basic concepts. Subsequently existing representative process models are introduced followed by a description of how to create individual models and the necessary means for doing so, i.e. notations and tools. Lastly different possible usage scenarios for process management are highlighted, e.g. process improvement and software process simulation. Their book is aimed at students and researchers working on software project management, software quality assurance and software measurement and at practitioners who are interested in process definition and management for developing, maintaining and operating software intensive systems and services. **Action Focused Assessment for Software Process Improvement** Tim Kasse, 2002 This informative book is designed to help professionals involved with development of software or systems manage process improvement initiatives within their company by explaining the history, method and psychology behind AFA.

McCollum, 2004 Foreword After

more than two decades since the advent of Total Quality Management one might think there was nothing left to say regarding its application but Walter Ray McCollum shows that one would be wrong Process Improvement in Quality Management Systems Case Study of Carnegie Mellon s Capability Maturity Model CMM explores how a company can obtain Level 3 compliance where an organization s processes for management and engineering activities are formally defined documented and integrated into a standard process that is understood and followed by the organization s staff in the development and maintenance of software Once an organization has reached this level it has a foundation for continuing progress New processes and tools can be added with minimal disruption and new staff members can be easily trained to adapt to the organization s practices Numerous case studies have been enacted across industries to describe successful and unsuccessful implementation of quality management systems and programs Several generic frameworks for quality management implementation have been proposed to help organizations achieve quality productivity and gain a competitive edge However few attempts have been made to synthesize frameworks for measuring quality management practices especially with regard to managing software quality Phan 2001 found the best known work concerned with process improvement was the Software Engineering Institute Capability Maturity Model CMM However very few studies have examined the effects of process improvement on quality management systems and no studies have addressed the variables that impact the effective use of SW CMM McCollom mitigates these gaps to offer software development professionals and

developers of quality management systems the information they need to enhance their effective use of SW CMM This book empowers projects teams and organizations by giving them the foundation to support reasoned choice and identify findings relative to the effects of process improvement in quality management systems using SW CMM process focus and risk management training Marilyn K Simon Ph D President Math Power **Software Process Improvement** Reidar Conradi,Tore Dybå,Dag I.K.
