**Applications of Systems Approaches at the Farm and Regional Levels** P.S. Teng, M.J. Kropff, H.F.M. ten Berge, J.B. Dent, F.P. Lansigan, H.H. Van Laar, 2012-12-06 Systems approaches for agricultural development are needed to determine rational strategies for the role of agriculture in national development Mathematical models and computer simulation provide objective tools for applying science to determine and evaluate options for resource management at field farm and regional scales However these tools would not be fully utilizable without incorporating social and economic dimensions into their application The second international symposium Systems Approaches for Agricultural Development held in Los Ba os 6-8 December 1995 fostered this link between the bio physical sciences and the social sciences in the choice of keynote papers and oral presentations a selection of which is included in this book The book s contents further reflect how systems approaches have definitely moved beyond the research mode into the application mode The large number and high quality of interdisciplinary research projects reported from different parts of the globe to determine land use options that will meet multiple goals and yet sustain natural resource bases is a key indicator of this coming of age At the farm level where trade off decisions between processes and products commodities feature strongly much progress is also evident in the development of systems based tools for decision making This book will be of particular interest to all agricultural scientists and planners as well as students interested in multidisciplinary and holistic approaches for agricultural development      **Proceedings of the XV International symposium Symorg 2016** Ondrej Jaško, Sanja Marinković, 2016-06-03      Business Process Engineering D. Jack Elzinga, Thomas R. Gullledge, Chung-Yee Lee, 2012-12-06 Due to growing concern about the competitiveness of industry in the international marketplace and the efficiency of government enterprises widespread initiatives are currently

underway to enhance the competitive posture of firms and to streamline government operations. Nearly all enterprises are engaged in assessing ways in which their productivity, product quality and operations can be improved. These efforts can be described as Business Process Engineering (BPE). BPE had its roots in industry under differing titles: Process Improvement, Process Simplification, Process Innovation, Reengineering, etc. It has matured to be an important ingredient of successful enterprises in the private and public sectors. After extensive exploitation by industrial and governmental practitioners and consultants, it is attracting increasing attention from academics in the fields of engineering and business. However, even with all of this attention in the popular literature, serious scholarly literature on BPE is in short supply. This is somewhat surprising, especially since so many large international organizations have attempted BPE projects with varied success.
