**Soil Conservation Service Curve Number (SCS-CN) Methodology** S.K. Mishra,V.P. Singh,2013-03-14 The Soil Conservation Service SCS curve number CN method is one of the most popular methods for computing the runoff volume from a rainstorm It is popular because it is simple easy to understand and apply and stable and accounts for most of the runoff producing watershed characteristics such as soil type land use hydrologic condition and antecedent moisture condition The SCS CN method was originally developed for its use on small agricultural watersheds and has since been extended and applied to rural forest and urban watersheds Since the inception of the method it has been applied to a wide range of environments In recent years the method has received much attention in the hydrologic literature The SCS CN method was first published in 1956 in Section 4 of the National Engineering Handbook of Soil Conservation Service now called the Natural Resources Conservation Service U S Department of Agriculture The publication has since been revised several times However the contents of the methodology have been nonetheless more or less the same Being an agency methodology the method has not passed through the process of a peer review and is in general accepted in the form it exists Despite several limitations of the method and even questionable credibility at times it has been in continuous use for the simple reason that it works fairly well at the field level *Soil Conservation Service Curve Number (SCS-CN) Method Current Applications, Remaining Challenges, and Future Perspectives* Konstantinos X. Soulis,2021-06-04 Probably the most well documented and at the same time simple conceptual method for predicting runoff depth from rainfall depth is the Soil Conservation Service curve number SCS CN method This Special Issue presents the latest developments in the SCS CN methodology including but not limited to novel applications theoretical and conceptual studies broadening the current understanding studies extending the method s application in other geographical regions or other scientific fields substantial evaluation studies and ultimately key advancements towards addressing the key remaining challenges such as improving the SCS CN method runoff predictions without sacrificing its current level of simplicity moving towards a unique generally accepted procedure for CN determination from rainfall runoff data improving the initial abstraction estimation investigating the integration of SCS CN method in long term continuous hydrological models and the implementation of various soil moisture accounting systems extending and adopting the existing CNs documentation in a broader range of regions land uses and climatic conditions and utilizing novel modeling geoinformation systems and remote sensing techniques to improve the performance and the efficiency of the method **Soil Conservation Service Curve Number (SCS-CN) Method Current Applications, Remaining Challenges, and Future Perspectives** Konstantinos X.
