Solar Energy Applications In Houses Performance And Economics In Europe:

Solar Energy Applications in Houses F Jäger, 2013-10-22 *Solar Energy Applications in Houses Performance and Economics in Europe* provides information on the state of development of solar space and water heating technology and on the influence of climatic and economic factors on the attractiveness of solar systems. The book discusses the aspects of climate relevant to solar system and house designs, the impacts of the different European climates on the thermal design and heating requirements of individual houses and the passive solar energy use in buildings. The text also describes the components of active solar energy systems, the performance of active solar energy systems and the economics of solar space and water heating. The supporting activities for solar energy systems and other energy saving technologies implemented by governments, companies, energy supply utilities, solar societies and the Commission of the European Communities are also considered. The book will be invaluable to potential buyers or owners of systems who need practical information on the technical and economic possibilities of domestic solar energy use in the various countries of the European Communities. The information is also important for those people in government administration, industry and research institutions who are involved in assessing solar energy applications in planning for the future energy supply in developing support measures for the introduction of energy saving methods and in marketing solar hardware.

Solar Energy Applications in Houses F. Jäger, Commission of the European Communities, 1981 *Solar Energy Update*, 1984 **Energy Abstracts for Policy Analysis**, 1983 **Eco-efficient Masonry Bricks and Blocks** Fernando Pacheco-Torgal, Paulo B. Lourenco, Joao

Labrincha, Prinya Chindaprasirt, S Kumar, 2014-11-27 Masonry walls constitute the interface between the building's interior and the outdoor environment. Masonry walls are traditionally composed of fired clay bricks, solid or perforated or blocks, concrete or earth based, but in the past and even in the present they were often associated as needing an extra special thermal and acoustical insulation layer. However, over more recent years, investigations on thermal and acoustical features have led to the development of new improved bricks and blocks that no longer need these insulation layers. Traditional masonry units, fired clay bricks, concrete or earth based blocks that don't offer improved performance in terms of thermal and acoustical insulation, are a symbol of a low technology past that are far removed from the demands of sustainable construction. This book provides an up to date state of the art review on the eco efficiency of masonry units; particular emphasis is placed on the design, properties, performance, durability and LCA of these materials. Since masonry units are also an excellent way to reuse bulk industrial waste, the book will be important in the context of the Revised Waste Framework Directive 2008/98/EC which states that the minimum reuse and recycling targets for construction and demolition waste (CDW) should be at least 70% by 2020. On the 9th of March 2011 the European Union approved the Regulation (EU) 305/2011 known as the Construction Products Regulation (CPR) and it will be enforced after the 1st of July 2013. The future commercialization of construction materials in Europe makes their environmental assessment mandatory, meaning that more information related

to the environmental performance of building materials is much needed Provides an authoritative guide to the eco efficiency of masonry units Examines the reuse of waste materials Covers a range of materials including clay cement earth and pumice
