Sustainable Water Management and Irrigation Systems João Carlos Correia Leitão, Wael Khairy, Dina Pereira, Jelena Zascerska, Pedro Dinis Gaspar, 2025-07-26. Globally, different regions are facing severe water shortages. Population growth, changing consumer behavior, and climate change seriously affect freshwater availability. Much of the water used for conventional irrigation infiltrates or evaporates and is therefore unusable. Thus, innovative irrigation systems must be developed to exploit largely unused non-conventional water resources. Additionally, low-cost solutions should be used with natural and regionally available materials. Low Technology, Low Energy, Low Budget, Easy to Use. The present edited volume aims at: i) making available holistic approaches to sustainable water and natural resources management systems; ii) presenting evaluation results of new micro-irrigation technologies tested in different international contexts; iii) contributing to effectively combating the negative impacts of climate change on water availability, agriculture, and food security; and iv) providing implications for policymakers, entrepreneurs, and

researchers interested in water management issues and sustainable development goals SDGs *Energy Resources and Systems* Tushar K. Ghosh, Mark A. Prelas, 2011-06-27 This second volume of *Energy Resources and Systems* is focused on renewable energy resources Renewable energy mainly comes from wind solar hydropower geothermal ocean bioenergy ethanol and hydrogen Each of these energy resources is important and growing For example high head hydroelectric energy is a well established energy resource and already contributes about 20% of the world's electricity Some countries have significant high head resources and produce the bulk of their electrical power by this method However the bulk of the world's high head hydroelectric resources have not been exploited particularly by the underdeveloped countries Low head hydroelectric is unexploited and has the potential to be a growth area Wind energy is the fastest growing of the renewable energy resources for the electricity generation Solar energy is a popular renewable energy resource Geothermal energy is viable near volcanic areas Bioenergy and ethanol have grown in recent years primarily due to changes in public policy meant to encourage its usage Energy policies stimulated the growth of ethanol for example with the unintended side effect of rise in food prices Hydrogen has been pushed as a transportation fuel The authors want to provide a comprehensive series of texts on the interlinking of the nature of energy resources the systems that utilize them the environmental effects the socioeconomic impact the political aspects and governing policies Volume 1 on Fundamentals and Non Renewable Resources was published in 2009 It blends fundamental concepts with an understanding of the non renewable resources that dominate today's society The authors are now working on Volume 3 on nuclear advanced energy resources and nuclear batteries consists of fusion space power systems nuclear energy conversion nuclear batteries and advanced power fuel cells and energy storage Volume 4 will cover environmental effects remediation and policy Solutions to providing long term stable and economical energy is a complex problem which links social economical technical and environmental issues It is the goal of the four volume *Energy Resources and Systems* series to tell the whole story and provide the background required by students of energy to understand the complex nature of the problem and the importance of linking social economical technical and environmental issues
