Solid State Devices, 1974 : Seven Invited Papers Presented at the Fourth European Solid State Physics Device Research Conference (essderc) Held at the University of Nottingham, 16-19 September 1974 European solid state physics device research conference, 4th (nottingham university, 1974. i),1975 **Solid State Devices** ,1975 **Solid State Devices, 1976** Rudolf Mu ller,E. Lange,1977 *Solid State Devices* ,1981 Contains invited papers presented at the European Solid State Device Research Conference **Solid State Devices, 1975** ,1976 Solid State Devices 1974 L.A. G. Milnes,2012-12-06 For some time there has been a need for a semiconductor device book that carries diode and transistor theory beyond an introductory level and yet has space to touch on a wider range of semiconductor device principles and applica tions Such topics are covered in specialized monographs numbering many hundreds but the voluminous nature of this literature limits access for students This book is the outcome of attempts to develop a broad course on devices and integrated electronics for university students at about senior year level The edu cational prerequisites are an introductory course in semiconductor junction and transistor concepts and a course on analog and digital circuits that has intro duced the concepts of rectification amplification oscillators modulation and logic and SWitching circuits The book should also be of value to professional engineers and physicists because of both the information included and the de tailed guide to the literature given by the references The aim has been to bring some measure of order into the subject area examined and to provide a basic structure from which teachers may develop themes that are of most interest to students and themselves Semiconductor devices and integrated circuits are reviewed and fundamental factors that control power levels frequency speed size and cost are discussed The text also briefly mentions how devices are used and presents circuits and comments on representative applications Thus the book seeks a balance be tween the extremes of device physics and circuit design **Applied Solid State Science** Raymond Wolfe,2013-10-22 Applied Solid State Science Advances in

Materials and Device Research Volume 5 covers articles on devices made with Si GaAs and CdS and on the photoconductive insulators of the xerographic process The book discusses design ideas and fabrication techniques that have raised the efficiency of microwave generators as well as xerography and photoinduced discharge characteristics of photoconductive insulators The text then describes a great variety of devices both unipolar and bipolar which make use of the advantages of ion implantation for introducing impurities into silicon in a most controllable manner The progress made toward the goal of providing a low cost solar energy conversion device for terrestrial applications is also considered The book further tackles high efficiency impatt diodes the physics of xerographic photoreceptors ion implantation in silicon and cadmium sulfide solar cells Solid state physicists materials scientists electrical engineers and graduate students studying the subjects being discussed will find the book invaluable Masters Theses in the Pure and Applied Sciences Wade H. Shafer, 2013-12-11 Masters Theses in the Pure and Applied Sciences was first conceived published and disseminated by the Center for Information and Numerical Data Analysis and Synthesis CINDAS at Purdue University in 1957 starting its coverage of theses with the academic year 1955 Beginning with Volume 13 the printing and dissemination phases of the activity was transferred to University Microfilms Xerox of Ann Arbor Michigan with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volume were handled by an international publishing house to assure improved service and broader dissemination Hence starting with Volume 18 Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York and in the same year the coverage was broadened to include Canadian universities All back issues can also be ordered from Plenum We have reported in Volume 19 thesis year 1974 a total of 10 045 theses titles from 20 Canadian and 209 United States universities We are sure that this broader base for theses titles reported will greatly enhance the value of this important annual reference work The organization of Volume 19 is identical to that of past years It consists of theses titles arranged by discipline and by university within each discipline Advances in Electronics and Electron Physics, 1978-11-23 **Advances in Electronics and Electron Physics** **Superconducting Devices & Materials**, 1978 **Scientific and Technical Aerospace Reports**, 1976 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database *Heteroepitaxial Semiconductors for Electronic Devices* G.W. Cullen, C.C. Wang, 2013-11-11 Some years ago it was not uncommon for materials scientists even within the electronics industry to work relatively independently of device engineers Neither group had a means to determine whether or not the materials had been optimized for application in specific device structures This mode of operation is no longer desirable or possible The introduction of a new material or a new form of a well known material now requires a close collaborative effort between individuals who represent the

disciplines of materials preparation materials characterization device design and processing and the analysis of the device operation to establish relationships between device performance and the materials properties The development of devices in heteroepitaxial thin films has advanced to the present state specifically through the unusually close and active interchange among individuals with the appropriate backgrounds We find no book available which brings together a description of these diverse disciplines needed for the development of such a materials device technology Therefore the authors of this book who have worked in close collaboration for a number of years were motivated to collect their experiences in this volume Over the years there has been a logical flow of activity beginning with heteroepitaxial silicon and progressing through the III V and II VI compounds For each material the early emphasis on material preparation and characterization later shifted to an emphasis on the analysis of the device characteristics specific to the materials involved **Solid State Devices, 1974**
