Nuclear Science Abstracts ,1974-05 *Wide-band-gap Semiconductors* C.G. Van de Walle,2012-12-02 Wide band gap semiconductors have been a research topic for many decades However it is only in recent years that the promise for technological applications came to be realized simultaneously an upsurge of experimental and theoretical activity in the field has been witnessed Semiconductors with wide band gaps exhibit unique electronic and optical properties Their low intrinsic carrier concentrations and high breakdown voltage allow high temperature and high power applications diamond SiC etc The short wavelength of band to band transitions allows emission in the green blue or even UV region of the spectrum ZnSe GaN etc In addition many of these materials have favorable mechanical and thermal characteristics These proceedings reflect the exciting progress made in this field Successful p type doping of ZnSe has recently led to the fabrication of blue green injection lasers in ZnSe applications of short wavelength light emitting devices range from color displays to optical storage In SiC advances in growth techniques for bulk as well as epitaxial material have made the commercial production of high temperature and high frequency devices possible For GaN refinement of growth procedures and new ways of obtaining doped material have resulted in blue light emitting diodes and opened the road to the development of laser diodes Finally while the quality of artificial diamond is not yet high enough for electronic applications the promise it holds in terms of unique material properties is encouraging intense activity in the field This volume contains contributions from recognized experts presently working on different material systems in the field The papers cover the theoretical experimental and application oriented aspects of this exciting topic Proceedings of the Symposium on Fundamental Aspects of High Temperature Corrosion--II David A. Shores,Gregory J. Yurek,1986 **Fiftieth Anniversary, 1912-1962** Institute of Radio Engineers,1962 **Advances in Chemical Physics, Volume 81** Ilya Prigogine,Stuart A. Rice,2009-09-09 The Advances in Chemical Physics series provides the chemical physics and physical chemistry fields with a forum for critical authoritative evaluations of advances in every area of the discipline Filled with cutting edge research reported in a cohesive manner not found elsewhere in the literature each volume of the Advances in Chemical Physics series serves as the perfect supplement to any advanced graduate class devoted to the study of chemical physics *Energy Research Abstracts* ,1992

Developments in Crystalline Polymers—1 David C. Bassett,2013-04-17 Crystalline or more properly semi crystalline polymers continue to present major challenges and opportunities to scientists and technologists alike On the one hand scientific understanding of their structure and properties still lags behind that of other economically important but less complicated materials On the other hand there remains very considerable potential for improving properties in systems designed for specific purposes Ways are only just being found of transferring inherent molecular properties such as high modulus to the macromolecular solid Beyond these are many possibilities of manipulating the organization of chemical and physical textures towards desired ends The chapters in this volume are reports by well known and active researchers on

some of the important recent developments of these themes Grubb begins with the fundamental and central problem of determining polymeric microstructure Polymers suffer by comparison with other materials in that it has not generally been possible to exploit the high resolution of the electron microscope to determine their microstructure in adequate detail However recently ways have been found of studying representative lamellar textures in melt crystallized polymers When fully exploited these must add greatly to our detailed knowledge and provide a firmer fundamental base for future developments Radiation damage bears the primary responsibility for restricting electron microscopy In his chapter Kener recounts how appreciation of this fact led him into a fascinating study of ever deeper aspects of radiation damage in polyethylene over two decades often controversially but invariably clarifying the basic understanding of an area now of increasing commercial importance

Carbon for Sensing Devices Danilo Demarchi, Alberto Tagliaferro, 2014-10-07 This book reveals why carbon is playing such an increasingly prominent role as a sensing material The various steps that transform a raw material in a sensing device are thoroughly presented and critically discussed The authors deal with all aspects of carbon based sensors starting from the various hybridization and allotropes of carbon with specific focus on micro and nano sized carbons e g carbon nanotubes graphene and their growth processes The discussion then moves to the role of functionalization and the different routes to achieve it Finally a number of sensing applications in various fields are presented highlighting the connection with the basic properties of the various carbon allotropes Readers will benefit from this book's bottom up approach which starts from the local bonding in carbon solids and ends with sensing applications linking the local hybridization of carbon atoms and its modification by functionalization to specific device performance This book is a must have in the library of any scientist involved in carbon based sensing application
