Software Engineering Approaches for Offshore and Outsourced Development Kay Berkling, Mathai Joseph, Bertrand Meyer, Martin Nordio, 2009-05-22

Major economic upheavals can have the sort of effect that Schumpeter foresaw 60 years ago as creative destruction In science and technology equivalent upheavals result from either scientific revolutions as observed by Kuhn or the introduction of what Christensen calls disruptive technologies And in software engineering there has been no technology more disruptive than outsourcing That it should so quickly reach maturity and an unparalleled scale is truly remarkable that it should now be called to demonstrate its sustainability in the current financial turmoil is the challenge that will prove whether and how it will endure Early signs under even the bleak market conditions of the last 12 months are that it will not only survive it will firmly establish its role across the world of business Outsourcing throws into sharp focus the entire software engineering life cycle Topics as diverse as requirements analysis concurrency and model checking need to find a composite working partnership in software engineering practice This conclusion arises from need not dogma and the solutions required are those that will have the right effect on the associated activities in the world of the application e.g. reducing the time for a transaction or making the results of a complex analysis available in real time While the business of outsourcing continues to be studied the engineering innovations that make it compelling are constantly changing It is in this milieu that this series of conferences has placed itself

Methodology Lucienne T.M. Blessing,Amaresh Chakrabarti,2009-06-13 The initial motivator for the development of DRM a Design Research Methodology and the subsequent writing of this book was our frustration about the lack of a common terminology benchmarked research methods and above all a common research methodology in design A shared view of the goals and framework for doing design research was missing Design is a multidisciplinary activity occurring in multiple application areas and involving multiple stakeholders As a consequence design research emerges in a variety of disciplines for a variety of applications with a variety of subjects This makes it particularly difficult to review its literature relate various pieces of work find common ground and validate and share results that are so essential for sustained progress in a research community Above all design research needs to be successful not only in an academic sense but also in a practical sense How could we help the community develop knowledge that is both academically and practically worthwhile Each of us had our individual ideas of how this situation could be improved Lucienne Blessing while finishing her thesis that involved studying and improving the design process developed valuable insights about the importance and relationship of empirical studies in developing and evaluating these improvements Amaresh Chakrabarti while finishing his thesis on developing and evaluating computational tools for improving products had developed valuable insights about integrating and improving the processes of building and evaluating tools *Computing, Control, Information and Education Engineering* Hsiang-Chuan Liu,Wen-Pei
