Soil Nitrogen:

Soil Nitrogen Uses and Environmental Impacts Rattan Lal, B.A. Stewart, 2018-03-15 Nitrogen N is potentially one of the most complex elements on the Earth. It is necessary for all biological activity but creates negative impacts on water and air quality. There is a balancing act between deficiency and surplus and the forms of N available further complicate our understanding of the dynamics. Biological fixation provides some plants with N supply while others are totally dependent upon N being available in the soil profile for the roots to extract. Nevertheless, the demand for N will increase because the human population with its increasing growth requires more protein and thus more N. Understanding the global N cycle is imperative to meeting current and future nitrogen demands while decreasing environmental impacts. This book discusses availability, production and recycling of N in air, water, plants and soils. It features information on N impacts to soil and water quality, management of N in agroecosystems and techniques to maximize the use efficiency while minimizing the risks of leakage of reactive N into the environment. This volume in the Advances in Soil Science series is specifically devoted to availability, production and recycling of N with impact on climate change and water quality and management of N in agroecosystems in the context of maximizing the use efficiency and minimizing the risks of leakage of reactive N.

Reduced Atmospheric Deposition Conditions in a Norway Spruce Forest Ecosystem Zhuo Feng, 2010 In the past century anthropogenic activities have increased N input drastically to terrestrial ecosystems and influenced the global N cycle Especially temperate forest ecosystems are affected in their productivity species composition soil chemistry and water quality N input to forest ecosystems is retained in trees and soil Excessive N is leached out or released as gases The retention of N input in soils is mainly influenced by the stability of soil organic matter SOM Many forests in central Europe and North America have been subjected to N saturation i.e. excessive N appeared as nitrate in the leachate below the rooting zone Reduction of atmospheric N emission and consequent atmospheric N deposition is proposed to be the only practical long term solution to improve N saturated forest ecosystems However responses of N saturated forest ecosystems to reduced atmospheric N deposition have been seldom investigated In the present study atmospheric deposition was manipulated through roof constructions below the canopy of a mature Norway spruce forest on the Solling plateau in central Germany A 5 N tracer field and a density fractionation laboratory experiment were conducted in the present study to investigate the

influence of long term reduced atmospheric N deposition on the partitioning of atmospheric N in different forest ecosystem compartments as well as on the partitioning of atmospheric N retained in the soil in different SOM pools Nitrogen Metabolism in Crops and Model Plant Species Luisa Bascunan-Godoy, Enrique Ostria-Gallardo, Néstor Fernández Del-Saz, 2024-10-21 Nitrogen N is an important macronutrient for plant growth and development Research has long been carried out to elucidate plant mechanisms related to N metabolism important for productivity under stress and non stress conditions Despite recent advances many of these mechanisms are not yet fully understood In this Research Topic we hope to present several research studies related to genetic biochemical and physiological aspects important for N uptake assimilation and utilization in crops and model plant species Together the articles in this issue will provide an integrated perspective on important questions related to N physiology metabolism and growth in plant organs highlighting the fundamental importance of diverse plant traits under a climate change scenario **Optimizing Nitrogen Management in Food and Energy**

Production and Environmental Protection J. Galloway, C. Jordan, Joe Wisniewski, J.W. Erisman, E. Cowling, 2002-01-01 The production of food and energy interfere with the natural nitrogen cycle of the earth Many of these changes are beneficial while others are detrimental to societies and the environment The changing nature of nitrogen in the global environment crosses scientific disciplines geographical boundaries and political divisions and challenges the creative minds of natural and social scientists economists engineers business leaders and planners The papers in this book give readers a panoramic view of the changing nature of reactive nitrogen in the global environment enabling them to make better choices about nitrogen management in food production and consumption energy production and use and environmental protection Management of Nitrogen and Phosphorus Fertilizers in Sub-Saharan Africa Uzo M. Mokwunye, Paul L.G. Vlek, 2012-12-06 Food security one of the basic human rights seems to be ever eluding the people of sub Saharan Africa With each occurrence of crop failure agriculturalists around the world reawaken to the challenge of ensuring stable adequate food production in the tropical African environments The International Fertilizer Development Center IFDC with its mandate of alleviating food shortages through judicious use of fertilizers formulated a program to study fertilizer use strategies for sub Saharan Africa With generous financial assistance from the International Fund for Agricultural Development IFAD IFDC in collaboration with the International Crop Research Institute for the Semi Arid Tropics ICRISAT and the International Institute for Tropical Agriculture IITA initiated a research project aimed at assessing means to remedy soil nutrient deficiencies that constrain food production in the humid subhumid and semiarid tropics of Africa The results of this project were summarized during a workshop held in Togo March 25-28 1985 the proceedings of that meeting are found in this volume The project established collaboration with numerous national programs that were responsible for much of the data collection The data presented in Chapters 6 and 9 include much of this information We wish to acknowledge the contribution of the individual scientists J.T. Reality and Its Role in Technology Transfer Margaret Gale, Robert F. Powers, James Reid Boyle, 2005-12-21 This collection represents a unique set of essays on the role of theory in shaping the practice of medicine across disciplinary boundaries. In the context of this volume, theory relates to the conceptual models, frameworks, knowledge representations, metaphors, and analogies that inform the problem-solving efforts of practitioners seeking to develop novel dialogues both within and across disciplinary boundaries. Contributors to this volume include computational scientists, chemists, medical researchers, biologists, and philosophers, all drawing on personal experience in their respective fields to produce a genuinely interdisciplinary range of perspectives on the common theme of theory in medical thinking and multidisciplinary research practice. Selected and edited papers from the 10th North American Forest Soils Conference held in Saulte Ste Marie, Ontario, Canada, July 20-24, 2003. A unique spin-off from Elsevier's highly regarded journal *Forest Ecology and Management*. An estimated 400 pages of the latest findings in forest soil ecology from the most prominent researchers in the field.

Definitional Glossary of Agricultural Terms: Volume I Dinesh Kumar, 2013-12-30 Definitional Glossary of Agricultural Terms Vol 1 includes the terms related mainly to agronomy, crop production, sustainable agriculture, agro-ecology, environment, soil science, soil fertility, plant nutrition, organic farming, latest concepts in agronomy, agro-forestry, and grassland agriculture, agricultural economics, and farm management, etc. It explains especially the new terms in a comprehensive and easy-to-understand way. Very often descriptive text, related terms, synonyms, and antonyms are given in addition to the proper definition to help the reader to understand the term in its context and practical use. Although it is primarily a definitional glossary of agricultural terms used in India, but various terms in common use in other developing countries are also included.

Nitrogen in the Environment: Sources, Problems and Management R.F. Follett, J.L. Hatfield, 2001-12-03 *Nitrogen in the Environment: Sources, Problems and Management* is the first volume to provide a holistic perspective and comprehensive treatment of nitrogen from field to ecosystem to treatment of urban and rural drinking water supplies, while also including a historical overview, human health impacts, and policy considerations. It provides a worldwide perspective on nitrogen and agriculture. Nitrogen is one of the most critical elements required in agricultural systems for the production of crops for feed, food, and fiber. The ever-increasing world population requires increasing use of nitrogen in agriculture to supply human needs for dietary protein. Worldwide demand for nitrogen will increase as a direct response to increasing population. Strategies and perspectives are considered to improve nitrogen use efficiency. Issues of nitrogen in crop and human nutrition and transport and transformations along the continuum from farm field to ground water, watersheds, streams, rivers, and coastal marine environments are discussed. Described are aerial transport of nitrogen from livestock and agricultural systems and the potential for deposition and impacts. The current status of nitrogen in the environment in selected terrestrial and coastal environments and crop and forest ecosystems and development of emerging technologies to minimize nitrogen impacts on

the environment are addressed The nitrogen cycle provides a framework for assessing broad scale or even global strategies to improve nitrogen use efficiency Growing human populations are the driving force that requires increased nitrogen inputs These increasing inputs into the food production system directly result in increased livestock and human excretory nitrogen contribution into the environment The scope of this book is diverse covering a range of topics and issues from furthering our understanding of nitrogen in the environment to policy considerations at both farm and national scales
