Soil Equilibria:

Chemical Equilibria in Soils Willard Lyman Lindsay, 1979 This book's objective is to bridge the gap between soil science and soil chemistry and to show that most reactions taking place in soils can be understood and predicted from basic chemical relationships

Chemical Equilibria and Kinetics in Soils Garrison Sposito, 1994 This book develops a unified comprehensive account of the important chemical processes in soils that can be described by reactions The perspective taken is that of chemical thermodynamics and kinetics applied to soil systems in detail in order to provide an understanding of phenomena ranging from complexation reactions to colloidal flocculation Problem sets are included at the end of each chapter

Effective Stress and Equilibrium Equation for Soil Mechanics Longtan Shao, Xiaoxia Guo, Shiyi Liu, Guofeng Zheng, 2017-12-06 The concept of effective stress and the effective stress equation is fundamental for establishing the theory of strength and the relationship of stress and strain in soil mechanics and poromechanics However up till now the physical meaning of effective stress has not been explained clearly and the theoretical basis of the effective stress equation has not been proposed Researchers have not yet reached a common understanding of the feasibility of the concept of effective stress and effective stress equation for unsaturated soils Effective Stress and Equilibrium Equation for Soil Mechanics discusses the definition of the soil skeleton at first and clarifies that the soil skeleton should include a fraction of pore water When a free body of soil skeleton is taken to conduct internal force analysis the stress on the surface of the free body has two parts one is induced by pore fluid pressure that only includes normal stress the other is produced by all the other external forces excluding pore fluid pressure If the effective stress is defined as the soil skeleton stress due to all the external forces excluding pore fluid pressure the effective stress equation can be easily obtained by the internal force equilibrium analysis This equation reflects the relationship between the effective stress total stress and pore fluid pressure which does not change with the soil property The effective stress equation of saturated soils and unsaturated soils is unified i.e. o o t Seuw 1 Se ua For multiphase porous medium o o t u u Seiui i 1 2 M In this book a theoretical formula of the coefficient of permeability for unsaturated soils is derived The formula of the seepage force is modified based on the equilibrium differential equation of the pore water The relationship between the effective stress and the shear strength and deformation of unsaturated soils is preliminarily verified Finally some possibly controversial problems are discussed to provide a better understanding of the role of the equilibrium equation and the concept of effective stress

Acid Deposition and the Acidification of Soils and Waters J.O. Reuss, D.W. Johnson, 2012-09-10 The majority of this book was written in 1983 84 while the senior author was a Visiting Scientist at Oak Ridge National Laboratory ORNL in Oak Ridge Tennessee We believe that the approach to the problem of acid deposition effects on soils and waters developed during this collaboration contains elements that are significantly different from most prior work in this area Some of the material and the software used in the development of these concepts stem from earlier individual efforts of the authors However what we believe to be the more significant concepts concerning the processes by which alkalinity may be developed in acid soil solutions and by which acid deposition may contribute to the loss of this alkalinity were the result of this collaboration The ultimate usefulness of these concepts in understanding and dealing with various aspects of the problems associated with acid deposition cannot be adequately gauged at the present time They must first withstand tests of consistency with available observation and of direct experimentation It is our hope that dissemination through this book will facilitate this process within the scientific community The authors wish to thank the administration of the Environmental Science Division at ORNL and the College of Agricultural Sciences at Colorado State University for their support in arranging this collaboration We also wish to express our appreciation for the financial support provided by EPA Personal thanks are due to Dr
