Solidification Processes And Microstructures A Symposium In Honor Of Prof W Kurz:

Solidification Jonathan A. Dantzig, Michel Rappaz, 2016-11-18 Solidification is one of the oldest processes for producing complex shapes for applications ranging from art to industry and remains as one of the most important commercial processes for many materials Since the 1980s numerous fundamental developments in the understanding of solidification processes and microstructure formation have come from both analytical theories and the application of computational techniques using commonly available powerful computers This book integrates these developments in a comprehensive volume that also presents and places them in the context of more classical theories This second edition highlights the key concepts within each chapter to help guide the reader through the most important aspects of the topics The figures are now in color in order to improve the visualization of phenomena and concepts Recent important developments in the field since the first edition was published have also been added The three part text is aimed at graduate and professional engineers The first part Fundamentals and Macroscale Phenomena presents the thermodynamics of solutions and then builds on that subject to motivate and describe equilibrium phase diagrams Transport phenomena are discussed next focusing on the issues of most importance to liquid solid phase transformations then moving on to describing in detail both analytical and numerical approaches to solving such problems The second part Microstructure employs these fundamental concepts for the treatment of nucleation dendritic growth microsegregation eutectic and peritectic solidification and microstructure competition This part concludes with a chapter describing the coupling of macro and microscopic phenomena in microstructure development The third and final part describes various types of Defects that may occur with emphasis on porosity hot tearing and macrosegregation presented using the modeling tools and microstructure descriptions developed earlier

Solidification Michel Rappaz, Jonathan A. Dantzig, 2009-08-21 Solidification is one of the oldest processes for producing useful implements and remains one of the most important modern commercial processes This text describes the fundamentals of the technology in a coherent way using consistent notation

Solidification Processes and Microstructures Michel Rappaz, Christoph Beckermann, Rohit Trivedi, 2004-03 Papers from a March 2004 symposium describe recent work in solidification processes and microstructures in the areas of mushy zone dynamics rapid solidification and phase field modeling Some specific topics include kinetics of dendritic mushy zones anisotropy effects in lamellar eutectic growth network modeling of liquid metal transport in solidifying aluminum alloys and the topology of coarsened microstructures Other topics include diffuse solid liquid interfaces and solute trapping phase selection transitions during undercooled melt solidification dendritic growth in confined spaces the influence of foreign particles in the formation of polycrystalline solidification patterns and a cellular automaton for growth of solutal dendrites Annotation 2004 Book News Inc Portland OR booknews.com
